UNITED STATES PATENT OFFICE.

WILLIAM GEE, OF NEW YORK, N. Y.

ASH AND GARBAGE SAFE.

Specification of Letters Patent No. 22,176, dated November 30, 1858.

To all whom it may concern:

Be it known that I, WILLIAM GEE, residing in the city of New York, county of New York, State of New York, and a citizen of the United States, have invented a new and Improved Safety Ash and Garbage Safe; and I do declare that the following is a full and exact description of the said invention.

The object of said invention being to prevent rag pickers and other persons spreading the ashes and garbage over the streets and pavements, and causing a bad odor, and thereby, becoming a nuisance. As the law requires that all garbage, ashes, and every other offal shall be placed in close vessels, and not to be thrown in the street, this improvement is to prevent any access to it by any other person than the street scavenger as required by the municipal laws or regulations, and also to prevent the ashes from being blown about the streets, during high winds.

I construct a safe or case B B, Figure 1, square, elongated, or any other form suitable for the purpose. To this case B B, is attached a foot C with arms attaching the foot to the case B B, also represented in Fig. 4. I then construct two chests F E, Fig. 2, to fit into the case B B, the one to hold garbage, the other to hold ashes. To these chests F E are attached handles H, H, H, H, Fig. 2, also rollers I I I I.

The case B B Fig. 1, has a cover A to shut tight on the case B B, Fig. 1, also seen closed at Fig. 4. To the cover A is attached a small catch K to fasten the chest F, Fig. 2, in its place, the chest E being secured by a lock common to both.

On the outside of the case at M, Fig. 4, is a projecting catch or guide to prevent the cover falling too far back.

L is hinges to the cover A.

D D, Figs. 3 and 4, represent the curb or pavement in which the foot C is buried.

Fig. 4 represents the whole apparatus shut. Fig. 3, the apparatus open.

N, Fig. 4, is the lock ring.

I I, Fig. 4, are handles to draw out chests F E.

G G G G are flanges, Fig. 1.

What I claim and desire to secure by Letters Patent is—

The combination in a close case of the two chests F E with rollers I I I I, Fig. 2, and arms extending from foot C, Fig. 1, attached to the case B B, the top being ornamented, also the mode of securing the said chests and case as herein described and for the purposes herein set forth.

WILLIAM GEE.
