UNITED STATES PATENT OFFICE.

DANIEL BOWKER, OF BOSTON, MASSACHUSETTS.

IMPROVED CARPET SLIPPER.

Specification forming part of Letters Patent No. 48,788, dated July 13, 1865.

To all whom it may concern:

Be it known that I, DANIEL BOWKER, of Boston, in the county of Suffolk and State of Massachusetts, have invented a new and useful Improvement in Carpet Slippers; and I do hereby declare the same to be fully described in the following specification, and represented in the accompanying drawings, of which—

Figure 1 is a side view, and Fig. 2 a longitudinal section, of a slipper containing my improvements.

In the manufacture of slippers of a stout material it has been found that the sewing or "stitching," as it is termed, is insufficient to hold the parts together, particularly where the quarter is sewed to the vamp or upper, and that they soon break apart and render the slipper worthless. Furthermore, as slippers are ordinarily constructed, they cannot be worn where there is any dampness, as the soles are thin and easily penetrated by moisture, and as a consequence they can only be worn in the house. In very cold weather the soles of common slippers are so little protection to the feet even in the house that the wearer often is obliged to change them to something thicker.

My invention consists, first, in making a slipper with a water-proof inner sole, which, while it renders the slipper warm and comfortable

in the house, will at the same time allow the wearer to go about out of doors, more or less, with impunity.

My invention also consists in strengthening the slipper where the quarter is united to the upper by means of a rivet in connection with the ordinary stitching, substantially as hereinafter described, which firmly secures the parts together and renders it almost impossible to pull them apart.

In the drawings, A denotes the vamp or upper; B, the quarter; C, the outer sole, and D the inner water-proof sole, the two being sewed together in the usual manner. E is the rivet which secures the front part of the quarter to the vamp, as shown in the drawings, in addition to the stitching, which is shown at *a*.

I claim—

As a new article of manufacture, a carpet slipper provided with a water-proof inner sole, and having the quarter united to the upper by means of a rivet or rivets, in connection with the ordinary stitching, as hereinbefore described.

DANL. BOWKER.
