Henry O. Baker.

UNITED STATES PATENT OFFICE.

HENRY O. BAKER, OF NEW YORK, N. Y.

IMPROVEMENT IN CURTAIN-FIXTURES.

Specification forming part of Letters Patent No. **55,978**, dated July 3, 1866.

To all whom it may concern:

Be it known that I, HENRY O. BAKER, of the city and county and State of New York, have invented a new and useful Improvement in Cord-Fixtures for Window-Shades; and I do hereby declare that the following is a full and exact description thereof, reference being had to the accompanying drawings, and to the letters of reference marked thereon.

The nature of my invention consists in using a lever-button, Fig. A, which, when turned, fastens by the point, Fig. C, entering a hole, Fig. D, on the side of the fixture, as seen in Fig. B. The length of the button must be regulated according to the width of the fixture. The

cord-reel E being on the lever-arm of the button A enables the cord F to hold the button firmly in its place. The tighter the cord the firmer is the button held in its place.

What I claim as new and useful, and desire to secure by Letters Patent as an improvement in window-shade fixtures, is—

The lever-button in combination with the perforated side of the frame, substantially and for the purposes as herein set forth.

HENRY O. BAKER.
