United States Patent Office.

THEODORE McPHERSON, OF BURLINGTON, NEW JERSEY, ASSIGNOR TO
JOHN McPHERSON, OF THE SAME PLACE.

Letters Patent No. 62,145, dated February 19, 1867.

IMPROVEMENT IN FASTENING FOR CARRIAGE CURTAINS.

The Schedule referred to in these Letters Patent and making part of the same.

Be it known that I, THEODORE McPHERSON, of the city of Burlington, in the county of Burlington, and State of New Jersey, have invented a new and useful Improvement upon the Manner of Fastening Curtains upon Carriages; and I do hereby declare that the following is a full, clear, and exact description of the same, reference being had to the annexed drawing, making a part of this specification, in which the parts marked by the—

Figure one (1) respectively are the elevators or parts of the framework on which the curtain rests when fastened.

No. two (2) is the plate of metal fastened upon the curtain on the outside, and through which the screw passes into the frame work.

No. three (3) is the side view of the screw with a revolving barrel and flange.

No. four (4) is the curtain itself with the eyelets.

This curtain-fastener is intended to operate by means of a revolving barrel, with a flange, which turns upon a stationary screw fastened permanently into the wood-work, thus avoiding the wear and tear incident to such curtain-fasteners in which the screw turns in the wood.

What I claim as my invention, and desire to secure by Letters Patent, is—

The combination of the screw, revolving barrel, and flange, as represented in fig. 3, when the same are arranged and operate substantially as described for the purpose specified.

THEODORE McPHERSON.
