United States Patent Office.

WILLIAM BRADLEY, OF LYNN, MASSACHUSETTS.

Letters Patent No. 68,036, dated August 27, 1867.

IMPROVED WASH-BASIN.

The Schedule referred to in these Letters Patent and making part of the same.

TO ALL PERSONS TO WHOM THESE PRESENTS SHALL COME:

Be it known that I, WILLIAM BRADLEY, of Lynn, in the county of Essex, and State of Massachusetts, have invented a new and useful Wash-Bowl or Basin; and do hereby declare the same to be fully described in the following specification, and represented in the accompanying drawings, of which—

Figure 1 is a top view, and

Figure 2 a longitudinal section of it.

The said invention is a combination of a wash-bowl and soap-receptacle or box, connected together at or near the edge of the bowl, or arranged substantially as exhibited in such drawings, in which A denotes the bowl, and B the box or receptacle. The latter may be attached to one edge or side of the former, so as to extend entirely beyond the same, or the two may be arranged in such manner that the box may project partially or a short distance into the bowl. Leading from the box to the interior of the bowl there may be one or more openings or passages *a*, such being arranged so as to cause the waste water from the soap, after use of the latter, to run into the bowl. The box I provide with a cover, *b*, hinged or otherwise suitably applied to it. Furthermore, there may be extended across the box, and parallel or about so with its bottom, a partition or guard, *d*, the same being so as to prevent the drippings of water from the soap after use from escaping from the box, when the basin is turned up so as to bring the soap-box below it. The soap-box answers the purpose of a handle to be grasped by a person when using the basin or bowl as a dipper. The arrangement of the soap-box so as to extend partly into the bowl, in manner as exhibited in the drawings, is a very convenient one, as it admits of the waste hole or holes of the box being made through the bottom of the box.

With my invention a piece of soap can be kept within the box, so as to be convenient of access when the bowl is to be used for washing.

What I claim as my invention, is—

The combination of the wash-basin and soap-box or receptacle, attached together as specified.

WM. BRADLEY.
