United States Patent Office.

E. T. CROCKETT, OF GUILFORD, MAINE.

Letters Patent No. 74,511, dated February 18, 1868.

IMPROVEMENT IN THREE-WHEELED FARM-WAGON.

The Schedule referred to in these Letters Patent and making part of the same.

TO ALL WHOM IT MAY CONCERN:

Be it known that I, E. T. CROCKETT, of Guilford, county of Piscataquis, and State of Maine, have invented an "Improved Attachment to a Three-Wheeled Farm-Wagon or Cart;" and I do hereby declare the following to be an exact description thereof, reference being had to the accompanying drawings, and to the letters of reference marked thereon, making a part of this specification, in which—

Figure 1 represents a side elevation of the three-wheeled wagon.

Figure 2, the attachment.

The nature of my invention consists in the combination of the hinged draught-plate, with its extension side-arms on each side of the wheel, and the hounds of the tongue in front, so as to turn the cart in the shortest possible curve.

A represents the body of the wagon; B B, the carriage-wheels and axle; C, coupling, extending from the axle and projecting in front of the wagon; D, the tongue or shafts, for one or two horses; E, the hounds that are attached to and hinged on a rod to the square revolving plate G. This square plate G is bolted to the coupling-pole C, and revolves on the bolt H as a pivot. At each side of the plate are attached three arms, J J J, that support the plate G and brace the axle K, upon which the third wheel, L, in front, runs, the wheel running between the side arms J. An iron square plate, M, is fastened also to the coupling-pole C, and against which the plate G operates, to prevent the wear of the coupling C.

What I claim as my invention, and desire to secure by Letters Patent, is—

The hinged draught-plate G, with side arms J, hound E, and coupling C, when constructed, combined, and operating with the third wheel L, as herein described, and for the purposes set forth.

E. T. CROCKETT.
