## MAIER ROTHSCHILD, OF HARRISBURG, PENNSYLVANIA.

Letters Patent No. 74,601, dated February 18, 1868.

### IMPROVEMENT IN PLIERS FOR BENDING SHEET METAL.

The Schedule referred to in these Aetters Patent and making part of the same.

### TO ALL WHOM IT MAY CONCERN:

Be it known that I, MAIER ROTHSCHILD, of the city of Harrisburg, county of Dauphin, and State of Pennsylvania, have invented new and improved Pliers for Bending Sheet Metal; and I do hereby declare the following to be an exact description thereof, reference being had to the accompanying drawings, and to the letters of reference marked thereon, making a part of this specification.

The nature of my invention consists in the form and construction of the metallic pliers, having a corrugated jaw at one side, and a concave jaw at the other, so as to hold sheet metal closely to the material upon which the

metal is pressed.

The object is to attach, by bending, small strips of sheet metal over the joints of hoop-skirt wire, where the ends meet to form the hoop, and to catch the metal and hold it firmly between the jaws A and B, and press it perfectly around the joint, so that the ends are held securely and permanently together.

A represents the corrugated or ribbed jaw, and B the hollow or concave jaw. What I claim as my invention, and desire to secure by Letters Patent, is-

The form, construction, and arrangement of the jaws A and B, and their combination with the handles and spring, as herein described and for the purpose set forth.
