WILLIAM L. DENIO, OF ROCHESTER, NEW YORK, ASSIGNOR TO
HIMSELF AND IRWIN DAVIS, OF THE SAME PLACE.

Letters Patent No. 82,927, dated October 13, 1868.

IMPROVEMENT IN ATTACHING ROSETTES TO HARNESS.

The Schedule referred to in these Letters Patent and making part of the same.

To all whom it may concern:

Be it known that I, WILLIAM L. DENIO, of Rochester, in the county of Monroe, and State of New York, have invented a certain new and useful Improvement in Attaching Rosettes to Harnesses; and I do hereby declare that the following is a full and exact description thereof, reference being had to the accompanying drawings, making part of this specification.

Figure 1 is a section of a rosette, showing its attachment to the harness by my improved means.

Figure 2, an inside view of the same.

The letters of reference indicate corresponding parts in both figures.

My improvement consists in constructing and arranging the rosette as hereafter described, whereby the same is easily applied and removed.

In the accompanying drawings, A indicates the rosette proper, and B a screw-loop, the screw part *a* of which screws in a corresponding screw-socket or nut *b* of the rosette, the nut being secured in place by screws *c c*, or equivalent. The loop *d* is slipped on over looped end *g* of the front piece of the headstall, and the twin straps *h h* of the side-piece *k* pass down through the end-loop of the front piece on opposite sides of the loop *d*, as shown most clearly in fig. 2, thus securing the screw-loop B, and preventing it from slipping.

Thus it will be perceived that the screw-loop B is secured to the headstall without the employment of any additional straps, and without changing the arrangement of the same, and it remains a fixture until removed purposely, which, however, is easily accomplished, when desired, by unshipping the straps. The rosette A, by being secured by simply screwing on, can be easily applied and removed, which is a desirable object to be accomplished. In ordinary harnesses, the rosettes are sewed on, or otherwise attached so as not to be removable without cutting. The screw-loops B can be made at but trifling expense, and can be easily applied to ordinary harnesses.

What I claim as my invention, and desire to secure by Letters Patent, is—

The rosette A, provided with the screw-socket or nut *b*, in combination with the screw-loop B and attaching-straps *g h*, the whole arranged as described, and operating in the manner and for the purpose specified.

In witness whereof, I have hereunto signed my name in the presence of two subscribing witnesses.

WM. L. DENIO.
