GEORGE PANCHOT, OF HASTINGS, MINNESOTA.

Letters Patent No. 83,305, dated October 20, 1868.

IMPROVED CARRIAGE-STEP.

The Schedule referred to in these Letters Patent and making part of the same.

To all whom it may concern:

Be it known that I, GEORGE PANCHOT, of Hastings, in the county of Dakota, and State of Minnesota, have invented a new and improved Carriage-Step; and I do hereby declare that the following is a full, clear, and exact description of the construction and operation of the same, reference being had to the accompanying drawings, making a part of this specification, in which—

Figure 1 is a perspective view, and

Figure 2 is a modification of my invention.

The object of this invention is to provide a neat, simple, and cheap attachable and removable step for wagons and other carriages.

In the drawings, A represents the body of the carriage, and B is a small platform or step, of wood or other suitable material, attached to its lower edge by means of supporting-bars, *b b*, or in any other manner that may be preferred. At the inner edge of this platform are fixed eye-bolts, *a a*, fig. 1.

The removable step is represented at C, and consists of a single rod, of iron or other suitable material, bent nearly or quite at right angles at *c*, *c'*, and *c''*, as shown

in fig. 1, or it may be made as shown in fig. 2. In both figures the hook formed by the angle *c''* is inserted into the eye-bolt.

In order to connect the rod C with the eyes which hold it, the lower end of the rod must be raised a little, the parts are then easily attached together, after which the rod is dropped into place, resting between the angles *c'* *c''*, upon the platform B, and being firmly held in position thereby.

The rod may be provided with one or more rounds, *r r*, when the carriage is very high from the ground.

A step thus constructed can be attached or removed in a moment. It is simple, light, inexpensive, neat in appearance, and not liable to get out of order.

Having thus described my invention,

What I claim as new, and desire to secure by Letters Patent, is—

The attachable and removable carriage-step, constructed substantially as above described.

GEORGE PANCHOT.
