Inventor.

J. M. Aubrey

United States Patent Office.

J. M. AUBREY, OF PORTAGE CITY, WISCONSIN.

Letters Patent No. 91,812, dated June 29, 1869.

IMPROVEMENT IN LAMP-LIGHT EXTINGUISHER.

The Schedule referred to in these Letters Patent and making part of the same.

Be it known that I, J. M. AUBREY, of Portage City, in the county of Columbia, in the State of Wisconsin, have invented a new and useful Apparatus for Extinguishing Lights of Lamps that are used with chimneys, (such as kerosene-lamps;) and I do declare that the following is a full and exact description thereof, reference being had to the accompanying drawings, and to the letters of reference marked thereon.

Figures 1 are views of the apparatus attached to chimneys.

Figure 2, apparatus detached.

The nature of my invention consists in providing the top of lamp-chimneys, with an extension to catch the air which is conveyed against it, and forcing it down the chimney to the light.

To enable others to make and use my invention, I will proceed to describe its construction and operation.

It is made of any metal, or anything that will not

fuse over a chimney; it is one inch high, and reaches one-third of the way around the top of the chimney; it is fastened to the chimney by three or more extensions, *a a a*.

The operation is to blow, or force air against the apparatus, which sends it (the air) down the chimney, extinguishing the light.

What I claim as my invention, and desire to secure by Letters Patent, is—

The application of an apparatus, or extension, made of metal, or anything substantially the same, as before described, which, by blowing against, or forcing air against, will turn it (the air) down the chimney, producing the desired effect.

J. M. AUBREY.
