CYRUS CARRIER, OF OSWEGO, NEW YORK.

*Letters Patent No. 92,794, dated July 20, 1869.*

## IMPROVED CLOTHES-DRIER.

The Schedule referred to in these Letters Patent and making part of the same.

Be it known that I, CYRUS CARRIER, of the city of Oswego, county of Oswego, and State of New York, have invented a new and useful Frame for Drying Clothes; and I do hereby declare that the following is a full, clear, and exact description of the construction and operation of the same, reference being had to the annexed drawings, making a part of this specification, in which—

Figure 1 is a longitudinal elevation.

Figure 2 is a perspective view.

Figure 3 is a section of one of the arms detached.

My invention consists in so constructing and arranging a clothes-drier, of a class to which it belongs, that when wanted for use, its arms can be adjusted and maintained at the same angles of inclination with one another, and also folded by applying force to one arm only.

This object is effected by providing for each bar, which is pivoted to a vertical spindle, a plate, with lips or lugs, marked C and D, one at each end.

The spindle upon which the arms turn, passes through the plate, so that each arm, when spread to a certain

angle, will press against lug C, and stop. Each successive arm being arrested in the same way, the whole number may be arranged for use by simply swinging the bottom arm, marked 8, into its position.

The dogs A and B work in slots in the brackets, and serve to hold all in a radial position.

When folded, the lug D, at the other end of the plate, engages the side of each bar, so that all are folded together by one movement.

Having described my invention,

What I claim, and desire to secure by Letters Patent, is—

1. The plate F, provided with lugs C and D, in combination with the pivoted bars of a clothes-drier, as and for the purpose set forth.

2. In combination with the arms 1, 2, and 3, and plates F, constructed as described, the dogs or buttons A and B, as and for the purpose set forth.

CYRUS CARRIER.
