

# United States Patent Office.

C. L. HAMMOND, OF JAVA, NEW YORK.

Letters Patent No. 94,886, dated September 14, 1869.

## IMPROVED MEDICAL COMPOUND.

The Schedule referred to in these Letters Patent and making part of the same.

### *To all whom it may concern:*

Be it known that I, C. L. HAMMOND, of Java, in the county of Wyoming, and in the State of New York, have invented certain new and useful Improvements in Medicine; and do hereby declare that the following is a full, clear, and exact description thereof.

My invention consists in a medicine called the "Fiery Dragon," as an internal and external remedy for man and beast.

It is composed of the following ingredients, and mixed in the following manner:

To one pint of linseed-oil add one pint of spirits of turpentine and two ounces of laudanum. Put in an open vessel in the open air, then add two ounces of oil of vitriol, and stir until cool, when it is ready for bottling and use.

This compound is intended for the cure of the following diseases:

Sore throat, diphtheria, swelled neck, rheumatism, neuralgia, piles, sore nipples, ague in the breast, burns and wounds, chapped hands, sore lips, salt rheum, warts, corns, and all lameness and eruptive bruises and sores that man and beast is heir to.

As an internal remedy for man, in the following diseases:

Bilious cholic, inflammation in the bowels, inflammation of the kidneys and lungs, general debility, &c.

As an internal remedy for horses and cattle:

Inflammation of the kidneys, bowels, and lungs, and all sickness that animals are subject to.

As an external remedy for beasts:

For sore neck or pipe, caused by the collar on the top of the neck, galls, poll-evil, kicks, strains, or bruises, scratches, and all hurts and injuries that horses are subject to.

Also all injuries to cattle, such as warts, foot-rot in sheep, scab, &c.

Directions for using for man internally:

For sudden attacks, such as bilious cholic, cholera-morbus, &c., take from fifteen to twenty drops, once in four hours. For inflammation of the bowels, lungs, kidneys, and general debility, take from ten to fifteen drops every six hours; in all the above cases to be dropped on sugar.

For diphtheria, swab the throat as often as necessary, and take from four to ten drops, according to the age of the patient, every six hours.

As an external application:

For running sore, wash well with saleratus-water before using the medicine, then inject with a syringe.

For rheumatism, sprains, bruises, swellings, salt-rheum, shingles, sore breasts and nipples, warts, sore lips, all bruises and eruptions, apply moderately with the fingers, three times a day until cured.

As an internal remedy for horses and cattle:

For all cases of inflammation or sudden attacks, give four ounces of the compound in half a pint of linseed-oil, every six hours until relieved. If a horse has diphtheria, give an ounce at a time, in a bran mash, and rub well on the glands externally.

As an external remedy for horses and cattle:

For all deep or running sores, like thistletoe, poll-evil, pipe, formed on the neck by the collar, first inject a solution of saleratus-water, then inject the medicine freely three times a day. In case of a bruise or hurt causing the swelling of the limb or other part, especially of a leg, let the part be opened in several places, and the saleratus-water and medicine be injected freely three times a day, and almost immediate relief will follow.

For grease scratches, galls, strains, corks, and bruises, apply moderately with the ends of the fingers, three times a day.

The same directions to be observed in cattle and sheep, except in cases of fouds and foot-rot, in which cases spread the hoof, and apply freely to the parts affected.

In all cases of swelling of horses, cattle, sheep, or swine, after castrating, apply the medicine freely, and almost immediate relief is obtained.

I do not confine myself to the specific proportions of my compound above mentioned, as they may be slightly varied according to the circumstances of each particular case.

Having thus fully described my invention,

What I claim as new, and desire to secure by Letters Patent, is—

The above-described medical compound, made substantially in the manner and for the purposes herein set forth.

In testimony that I claim the foregoing, I have hereunto set my hand, this 29th day of July, 1869.

C. L. HAMMOND.
