United States Patent Office.

PHILIP G. BECKLEY, OF NEWARK, NEW JERSEY.

Letters Patent No. 98,463, dated January 4, 1870; antedated December 22, 1869.

IMPROVED CHILD'S CHAIR AND TABLE.

The Schedule referred to in these Letters Patent and making part of the same.

To all whom it may concern :

Be it known that I, PHILIP G. BECKLEY, of Newark, in the county of Essex, and in the State of New Jersey, have invented certain new and useful Improvements in Child's Chair and Table combined; and do hereby declare that the following is a full, clear, and exact description thereof, reference being had to the accompanying drawings, and to the letters of reference marked thereon, making a part of this specification.

The nature of my invention consists in the combination of a child's play-table and chair, so as to form a dining-chair, as will be hereafter set forth and described.

Figure 1 is a perspective of the table and chair, so arranged as to form a high dining-chair.

Figure 2 is a perspective of the two, placed side by side on the floor.

Letter A represents an ordinary small chair, used by little children, which has a hook, *b*, attached to each one of its front legs, near the bottom.

B is a child's small play-table, which has four recesses formed in its top, in which the legs of the chair fit, so as to hold it steady, and prevent it from sliding about, and has two staples, *c*, on top, and two, *d*, at-

tached to the inner sides of the front legs, which receive the hooks *b*, on the chair, and thus bind the two firmly together.

When it is desired to form a high dining-chair, so that the child can sit at a large table, the chair A is placed upon the top of the table, and the hooks secured in the staples, and, as the legs of the table are spread further apart than those of a small child's chair, it forms a much safer and more solid one.

When the two are placed side by side, on the floor, and fastened together, the child is prevented from either falling from or upsetting the chair, while the table serves to hold its playthings.

Having thus described my invention,

What I claim, and desire to secure by Letters Patent, is—

The combination of the table B, with perforations and staples on its top, with the chair A, provided with the hooks, as and for the purposes specified.

In testimony that I claim the foregoing, I have hereunto set my hand, this 11th day of May, 1869.

PHILIP G. BECKLEY.
