JAMES L. JENSEN, OF BROOKLYN, NEW YORK.

Letters Patent No. 104,159, dated June 14, 1870.

IMPROVED LEMON-SQUEEZER.

The Schedule referred to in these Letters Patent and making part of the same.

To all whom it may concern:

Be it known that I, JAMES L. JENSEN, of Brooklyn, in the county of Kings and State of New York, have invented a new and useful Improvement in Lemon-Squeezers; and I do hereby declare that the following is a full, clear, and exact description thereof, which will enable others skilled in the art to make and use the same, reference being had to the accompanying drawing forming part of this specification.

My invention relates to the best means of inserting a lemon-squeezer in its handles, and consists in forming an annular flange on the cup, but below the top thereof, placing it upon the open shoulder of the handle, and detachably fastening thereon an independent annular ring flush with the top.

Figure 1 represents a sectional elevation of a lemon-squeezer constructed according to my improvements, and

Figure 2 is a plan of the handle, to which the bowl is attached.

Similar letters of reference indicate corresponding parts.

I make the bowls A with a horizontal flange, B, on the outside, near the top, and provide an annular re-

cess in the face of the handles C, to which they are to be attached. This recess is deeper than the thickness of the rim B, and it is widened on the plane of the top of the said rim when resting in the bottom. In this widened part a ring of wood, D, is secured by screws E fitting snugly between the top of the cup and the wall of the recess, and upon the top of the rim B.

This arrangement makes a very simple, cheap, and efficient fastening, and is applicable for securing the said cups into wood or metal for any other purpose.

Having thus described my invention,

I claim as new and desire to secure by Letters Patent—

The annular flange B, below the top of the cup, and the open circular recess in handle, combined with the independent annular ring D, detachably fastened thereto, as and for the purpose described.

The above specification of my invention signed by me this 25th day of April, 1870.

JAMES L. JENSEN.
