United States Patent Office.

BENJAMIN J. GREELY, OF BOSTON, MASSACHUSETTS.

Letters Patent No. 106,356, dated August 16, 1870.

IMPROVEMENT IN BUCKLES WITH BUTTON-HOLE ATTACHMENT.

The Schedule referred to in these Letters Patent and making part of the same.

I, BENJAMIN J. GREELY, of Boston, in the county of Suffolk and State of Massachusetts, have invented a new and useful article, being a Buckle and Button-Hole Combined, of which the following is a specification.

The drawing shows a perspective view of my buckle and button-hole combined.

A represents the frame, and
B, the spring-wire button-hole.

The tongues C C are shown in one piece with the button-hole B, but may be made separate.

In the button-hole shown, the ends of the frame A are represented as being bent around the spring wire, but it is obvious that the spring wire may be bent around the ends of the frame, they being bent parallel to the upper side of the frame for that purpose; or

the frame and wire piece may be secured together in any other suitable way.

I do not claim the method shown of attaching the wire piece to the frame, as I am aware that it is not new; nor do I claim any form of buckle alone, or metallic button-hole alone.

I claim as my invention—

1. A buckle in combination with a metallic button-hole, when constructed substantially as described.
2. The continuous wire piece B C, forming a metallic button-hole and the tongues of a buckle, in combination with the frame A, substantially as described.

B. J. GREELY.
