United States Patent Office.

JACOB H. BEIDLER, OF ADRIAN, MICHIGAN.

Letters Patent No. 109,712, dated November 29, 1870.

IMPROVEMENT IN IRONING-BOARDS.

The Schedule referred to in these Letters Patent and making part of the same.

To all whom it may concern:

Be it known that I, JACOB H. BEIDLER, of Adrian, in the county of Lenawee and State of Michigan, have invented certain new and useful Improvements in Ironing-Boards; and do hereby declare that the following is a full, clear, and exact description thereof, reference being had to the accompanying drawing and to the letters of reference marked thereon making a part of this specification.

The nature of my invention consists in the construction and arrangement of an "ironing or skirt-board," which can be fastened to any ordinary table and allow the skirt or other article to pass beneath the board.

In order to enable others skilled in the art to which my invention appertains to make and use the same, I will now proceed to describe its construction and operation, referring to the annexed drawing, in which—

Figure 1 is a bottom view of my ironing-board, and

Figure 2 is a side view, showing it attached to a table.

A represents an ironing or skirt-board constructed in the usual manner.

On the under side, at the broad end of the board A, is attached an L-shaped piece, B, the horizontal portion of which has one or more upward-projecting pins or points *a*, as shown in fig. 2.

The ironing-board is attached to a table in the manner shown, the L-shaped piece B coming around the edge of the table, and the pin or pins *a* penetrating into the table from below to hold the board, the board itself extending above and across the table, and projecting beyond the other end.

On the under side of the board, a suitable distance from the piece B, is secured a bar or other device, C, which rests upon the top of the table, and acts as a fulcrum to hold or support the board in proper position above the table.

Skirts or other articles may thus be ironed on the board and pass between it and the table.

Having thus fully described my invention,

What I claim as new, and desire to secure by Letters Patent, is—

The combination, with the board A, of the stationary under L-shaped piece B and fulcrum C, all as shown and described.

In testimony that I claim the foregoing, I have hereunto set my hand this 12th day of October, 1870.

JACOB H. BEIDLER.
