UNITED STATES PATENT OFFICE.

CORNELIOUS B. VERONEE, OF ATHENS, GEORGIA.

IMPROVEMENT IN RECTUM-BATHING APPARATUS.

Specification forming part of Letters Patent No. 116,895, dated July 11, 1871.

To all whom it may concern:

Be it known that I, CORNELIOUS B. VERONEE, of Athens, in the county of Clark and State of Georgia, have invented a new and Improved Battering Apparatus; and I do hereby declare that the following is a full, clear, and exact description thereof, which will enable others skilled in the art to make and use the same, reference being had to the accompanying drawing forming part of this specification.

This invention relates to improvements in apparatus for bathing the rectum or for administering injections; and it consists in a chair with a large opening through the bottom; a fluid-reservoir at the back, considerably above the bottom; and a hose-pipe for conducting the water down under the chair and discharging it upward through the hole in the bottom, said pipe being provided with a stop-cock, with a lever and handle for working it.

Figure 1 is a sectional elevation of my improved apparatus. Fig. 2 is a horizontal section taken on the line *xx* of Fig. 1. Fig. 3 represents an injecting-nozzle and hose to be attached to the pipe when required.

Similar letters of reference indicate corresponding parts.

A is an ordinary chair with a large opening in the bottom, to which I apply a water-tank C, at

the back above the seat, and to the tank I apply a leg or brace, B, for supporting it against falling over backward when charged with water. D is a hose-pipe attached to the bottom of the reservoir, and is to conduct the water under the chair and discharge it upward through the hole. E is a wide conical rim extending below the bottom to cause the discharged water to fall into a slop-bucket, F, which may be set on the floor below. The pipe may have any kind of a nozzle for sprinkling or injections, and short pipes, G, with injecting-nozzle, may be secured onto the end of said pipe. I is the stop-valve. K is a lever attached thereto, and L is a pull-piece rising up through the chair-seat for working the valve.

This bathing apparatus will be very serviceable to persons having infirmities requiring such treatment.

Having thus described my invention, I claim as new and desire to secure by Letters Patent—

The combination, with the chair having a hole through the bottom, of the water-tank and pipe, the latter being provided with a stop-valve, and all arranged substantially as specified.

C. B. VERONEE.
