UNITED STATES PATENT OFFICE.

JOSEPH LEMOINE, OF WINCHENDON, MASSACHUSETTS.

IMPROVEMENT IN PAINTERS' BRUSH-HOLDERS.

Specification forming part of Letters Patent No. 126,219, dated April 30, 1872.

SPECIFICATION.

I, JOSEPH LEMOINE, of Winchendon, in the county of Worcester and Commonwealth of Massachusetts, have invented certain Improvements in the Manner of Holding Brushes, of which the following is a specification:

Nature and Objects of this Invention.

My invention relates to the mode or manner of holding the brush or brushes from resting on the bottom of the tub or box by means of a spring which works in a hinge, and which is fastened to the tub or box, allowing the springs to be turned back when they are not in use. The object of this is to prevent the brush from being bent by resting upon the bottom of the tub or box, and to the inner tub or box, which is designed for holding worn-out brushes. Both of these tubs or boxes are supposed to contain water for the preserving of the brushes.

Description of the Accompanying Drawing.

Figure 1 is a top elevation of an apparatus embodying my invention. Fig. 2 is a vertical

section, showing the operation of the apparatus when in use. Fig. 3 shows the inner pot, tub, or box fastened to the outer one by means of screws at the bottom of it.

General Description.

A represents the tub or box; B, the place for holding water. C represents the springs holding the brushes. D represents the brushes as held in or by springs C. E represents the hinge in which the spring C works. F represents the screws which fasten the inner tub or box to the outer one.

Claim.

What I claim as my invention and improvement in painters' brush-holders is—

The arrangement of the springs or loops C, hinges E, in combination with the inner and outer tubs or vessels, as shown and described.

JOSEPH LEMOINE.
