# UNITED STATES PATENT OFFICE.

THOMAS B. BROWN, OF FAIRFIELD, MAINE, ASSIGNOR OF ONE-HALF OF  
HIS RIGHT TO GERALD & ALLEN, OF SAME PLACE.

## IMPROVEMENT IN PULLEY-BLOCKS.

Specification forming part of Letters Patent No. 126,376, dated May 7, 1872; antedated April 20, 1872.

*To all whom it may concern:*

Be it known that I, THOMAS B. BROWN, of Fairfield, in the county of Somerset and State of Maine, have invented a new and useful Improvement in Blocks, called "Revolving Sides," of which the following description is full and exact.

The revolving sides A A are separate from the sheave or middle piece B, and each revolves separately on the same axle C.

The advantage over ordinary blocks consists in saving the wear on rigging, and requiring less power to work the same.

I claim—

The revolving sides, to be used with the sheave, as and for the purpose described.

THOMAS B. BROWN.
