UNITED STATES PATENT OFFICE.

THOMAS HAMER, OF BOYLSTON, AND GEORGE W. ROBINSON, OF SANDY CREEK, NEW YORK.

IMPROVEMENT IN CHEESE-BANDAGERS.

Specification forming part of Letters Patent No. 127,600, dated June 4, 1872.

SPECIFICATION.

To all whom it may concern:

Be it known that we, THOMAS HAMER, of Boylston, in the county of Oswego and State of New York, and GEORGE W. ROBINSON, of Sandy Creek, in the county of Oswego and State of New York, have invented a new and Improved Self Cheese-Bandager and Extension Bandager; and we do hereby declare that the following is a full and exact description of the same, reference being had to the accompanying drawing and to the letters of reference marked thereon.

This invention has for its object the production of a bandager which shall be capable of extension and contraction to permit the formation of different sizes of cheese; and consists in certain details of construction, fully described hereinafter.

In the drawing is represented a side elevation of our improved bandager.

To enable others skilled in the art to make and use our invention, we will now proceed to describe fully its construction and operation.

C represents the bandager, consisting preferably of a suitable piece of metal bent to form a ring, one end of which is provided with projecting tongues and the other with corresponding sockets, as clearly shown in the drawing.

By means of this construction it may be employed with any size of hoop within the limits of its extension and still present a continuous surface upon its edges—a result impossible with the bandagers previously employed.

Having thus fully described our invention, what we claim as new, and desire to secure by Letters Patent, is—

The extension bandager C, constructed substantially as and for the purpose set forth.

This specification signed and witnessed this 13th day of February, 1871.

THOMAS HAMER.
GEO. W. ROBINSON.
