UNITED STATES PATENT OFFICE.

LORENZO PEARSON AND BURT H. SLUSSER, OF SOUTH BEND, INDIANA.

IMPROVEMENT IN TOILET-BRACKETS.

Specification forming part of Letters Patent No. **131,558**, dated September 24, 1872.

To all whom it may concern:

Be it known that we, LORENZO PEARSON and BURT H. SLUSSER, of South Bend, St. Joseph county and State of Indiana, have invented certain Improvements in Toilet-Brackets, of which the following is a description:

In reference to the accompanying drawing, Figure 1 is a front elevation, and Fig. 2 is a top section on the line *x x*, Fig. 1.

General Description.

A is a seamless piece, forming the rim of a till or drawer. B is a dressed piece attached to the bottom of the seamless piece A. C is a scroll attached to the front of the bottom B. D is the lid of the till or drawer, in two sections; the small section is permanently attached to the top of the seamless piece A, the other section being attached to the small one

by hinges; this will then constitute the till of the bracket. E is a mirror. F is the scroll-work constituting the frame of the mirror. To this scroll-work or frame the till, as above described, is permanently attached directly under the mirror.

Claim.

We claim as our invention—

The combination of the seamless piece A, the bottom B, the scroll C, the lid D, the mirror E, and the scroll-work F, substantially as described.

LORENZO PEARSON.
BURT H. SLUSSER.
