I. N. DEARDORFF.

Improvement in Stove for Smoke-Houses.

No. 132,143.

Patented Oct. 15, 1872.

UNITED STATES PATENT OFFICE.

ISAAC N. DEARDORFF, OF CANAL DOVER, OHIO.

IMPROVEMENT IN STOVES FOR SMOKE-HOUSES.

Specification forming part of Letters Patent No. 132,143, dated October 15, 1872.

To all whom it may concern:

Be it known that I, ISAAC N. DEARDORFF, of Canal Dover, in the county of Tuscarawas and State of Ohio, have invented a new and useful Stove or Furnace for Smoking Meats; and I do hereby declare that the following is a full and exact description thereof, reference being had to the accompanying drawing making part of this specification—

Figure 1 being a view of the stove in perspective; and Fig. 2, a longitudinal vertical

section of the same.

Like letters designate corresponding parts

in both figures.

The nature of my invention consists in a stove or furnace in which to generate smoke by burning twigs or other suitable fuel for smoking meats, the said stove being of peculiar construction for the purpose; the main objects being to increase the volume of smoke and to regulate its production, and to insure perfect safety against fire, substantially as hereinafter set forth.

The body A of the stove, of any required size and suitable form, has a perforated top, B, as represented, through which issues the smoke generated inside by imperfect com-

bustion. There may be also some perforations in the sides, as shown. In one end of the stove is a door, a, for admitting the fuel, which is placed on a grate, C, concave, or dishing, or sunk in the middle or front end, with sides raised a few inches, as indicated in Fig. 2, in order to keep the fuel sufficiently compacted. The rear part b, as shown, has grate-like openings, while the front part c is simply perforated. Under the grate is the ash-pan D; and draft-apertures \bar{d} d through the front of the stove, regulated by a slide or damper, admit air to regulate the draft, so as to produce the degree of combustion required to effect the purpose.

The stove is made of sheet-iron or cast-iron. What I claim as my invention, and desire

to secure by Letters Patent, is—

A smoke producing and distributing stove for curing meats, provided with the perforated top or cover B, and the grate C, constructed and arranged substantially as herein specified.

ISAAC N. DEARDORFF.
