UNITED STATES PATENT OFFICE.

ALBION K. WASHBURN, OF BRIDGEWATER, MASSACHUSETTS.

IMPROVEMENT IN JACKS FOR HOLDING SHOES.

Specification forming part of Letters Patent No. **143,267**, dated September 30, 1873; application filed May 28, 1873.

To all whom it may concern:

Be it known that I, ALBION K. WASHBURN, of Bridgewater, in the county of Plymouth and State of Massachusetts, have invented a certain new and useful Jack for Holding Boots and Shoes, of which the following is a specification:

The nature of my invention consists in an improved device for inclosing the last-pin, and in a new adjusting device for the toe-block.

Figure 1 is a side elevation of the jack. Fig. 2 is a section of the device for adjusting the toe-block.

Let A represent the base of the jack. C is the standard for supporting the heel of the last. D is a pin inserted in the rocking block D¹. This block is operated by the link D², bent lever D³, and screw E¹, the screw E¹ having a fixed nut, E, and a handle, E².

In jacking a boot or shoe, the pin D is inserted into the heel of the last in the ordinary way; then, by turning the screw E¹, power is exerted, through the bent lever D³, link D², and rocking block D¹, upon the pin D, throwing it forward, and thus pressing the toe of the boot or shoe hard onto the toe-block B², thus holding the boot or shoe firmly in position.

I claim as my invention—

In a jack for holding boots and shoes, the combination of the block D¹, link D², bent lever D³, and hand-screw E¹ E², when the parts are constructed and arranged as described.

ALBION K. WASHBURN.
