UNITED STATES PATENT OFFICE.

ALBERT O. BAKER, SANFORD W. GRANT, AND JAMES B. BLACK, OF
PROVIDENCE, RHODE ISLAND.

IMPROVEMENT IN BRACELETS.

Specification forming part of Letters Patent No. **149,824**, dated April 21, 1874; application filed
February 7, 1874.

CASE C.

To all whom it may concern:

Be it known that we, ALBERT OSBORN BAKER, SANFORD WHITING GRANT, and JAMES BELL BLACK, all of the city and county of Providence, in the State of Rhode Island, have invented a new and useful Improvement in Bracelets; and we do hereby declare that the following specification, taken in connection with the drawings making a part of the same, is a full, clear, and exact description thereof.

Figure 1 represents in perspective the finished bracelet. Fig. 2 represents, on an enlarged scale, a section, showing the arrangement of the several strands which compose the fabric of the bracelet.

In the drawings, *a a* are strands of fine wire, each being wound spirally around its own axis, either in right or in left hand convolutions, but all the strands being wound in the same direc-

tion. The convolutions of each strand are interlocked with those of the next adjacent one, as shown clearly at Fig. 2, until the desired width of fabric is obtained. The ends of the fabric are then to be trimmed with suitable mountings A, as shown at Fig. 1.

What we claim as our invention, and desire to secure by Letters Patent, is—

The improved bracelet, composed of spirally-twisted wire strands *a*, interlocked with each other, substantially as described and shown.

ALBERT OSBORN BAKER.
SANFORD WHITING GRANT.
JAMES BELL BLACK.
