UNITED STATES PATENT OFFICE

VICTOR KNECHT, OF CINCINNATI, OHIO.

IMPROVEMENT IN HAND JELLY-PRESSES.

Specification forming part of Letters Patent No. **163,210**, dated May 11, 1875; application filed March 22, 1875.

CASE 1.

To all whom it may concern:

Be it known that I, VICTOR KNECHT, of Cincinnati, Hamilton county, State of Ohio, have invented an Improvement in Hand Jelly-Presses, of which the following is a specification:

My invention is designed as an improvement on the hand jelly-press for which Letters Patent No. 141,809 were granted to J. M. Newton, August 12, 1873; and consists in such a construction of the cylinder and its base-plate that the cylinder is thereby made detachable, for the purpose of enabling the operator to remove the cylinder, empty the pressed fruit therefrom, and, when necessary, conveniently clean the vessel.

The accompanying drawing is a vertical section of my improved press.

A is the cylinder; B, the base-plate; C, the supporting-handle; D, the central screw; E, the screw-handle, and F the follower.

The handle E and the follower are united

by a peculiar device of mine, which is the subject of a separate application for Letters Patent.

The cylinder A, in place of being united to the base-plate B permanently, as heretofore, I make detachable by providing it with a bottom, *a*, of its own, through which a hole is made for the passage of the screw D.

A flange, *b*, may be employed to give steadiness to the cylinder when down.

I claim—

The base B, provided with fixed handle C and central screw-spindle D, in combination with the detachable cylinder A, having a bottom, *a*, follower F, and screw-handle E, all substantially as and for the purpose specified.

In testimony of which invention I hereunto set my hand.

VICTOR KNECHT.
