UNITED STATES PATENT OFFICE.

SIMON SCHEUER, OF NEW YORK, N. Y.

IMPROVEMENT IN COAT-HANGERS.

Specification forming part of Letters Patent No. **173,562**, dated February 15, 1876; application filed January 8, 1876.

To all whom it may concern:

Be it known that I, SIMON SCHEUER, of the city, county, and State of New York, have invented a new and Improved Coat-Hanger, of which the following is a specification:

Figure 1 represents a top view, and Fig. 2 is a side view of my improved coat-hanger.

Similar letters of reference indicate corresponding parts.

The object of my invention is to furnish an improved coat-hanger, which, by its greater strength, avoids the annoying tearing out of the common hangers, and which may also be employed for printing the name and address of the manufacturing tailor thereon.

The invention consists of a hanger of leather or similar material, provided with end mountings and wire bent eyes, to be attached to the coat or other article.

In the drawing, A represents a narrow strip or hanger, which is preferably made of leather, but which may also be made of any other material that is capable of resisting the strain to which it is exposed in equally durable manner.

Refuse scraps of leather may be utilized by being cut into strips of the required width, and then mounted at the ends with sheet-metal clips B, that are riveted or otherwise securely fastened thereto. Wire bent eyes C are retained by the clips B and sewed on the coat or other article of wearing apparel.

These hangers form not only a neater, but also a more durable, device than the coat-hangers generally in use, and may be furnished at a low price, giving the advantage of having the name of the tailor printed in gold letters thereon.

Having thus described my invention, I claim as new and desire to secure by Letters Patent—

As a new article of manufacture, a coat-hanger made of a strip, A, of leather or other material, end clips B, and wire eyes C, substantially in the manner described and set forth.

SIMON SCHEUER.
