UNITED STATES PATENT OFFICE

DAVID JACKSON, OF CHICAGO, ILLINOIS.

IMPROVEMENT IN FOLDING BOXES.

Specification forming part of Letters Patent No. **174,820**, dated March 14, 1876; application filed December 8, 1874.

To all whom it may concern :

Be it known that I, DAVID JACKSON, of Chicago, in the county of Cook and State of Illinois, have invented certain new and useful Improvements in Folding Boxes; and I do hereby declare the following to be a full, clear, and exact description thereof, reference being had to the accompanying drawing and to the letters of reference marked thereon.

The nature of my invention consists in a box formed of a series of longitudinal slats permanently secured to a flexible lining, and a flexible bottom attached to the box thus formed, as will be hereinafter more fully set forth.

In the annexed drawing, Figure 1 is a side view, and Fig. 2 an end view or top view, of my folding box, showing the same in circular form. Fig. 3 is an end view of the box, showing the same folded. Figs. 4 and 5 are end views, showing the box respectively in square and rectangular form.

The body A of my folding box is formed of a series of longitudinal bars or slats, *a a*, which

are glued or otherwise permanently attached to a flexible lining, *b*, of any suitable material. This allows the box to be folded flat, as shown in Fig. 3, when not in use, and when desired for use it can be made to assume any shape required, such as circular, square, rectangular, triangular, &c.

e is the bottom of the box, made of any suitable flexible material, and fastened to the inside of the body A. The bottom *e* being flexible admits of the box assuming any form required.

Having thus fully described my invention, what I claim as new, and desire to secure by Letters Patent, is—

A folding box, composed of the bars or slats *a*, flexible lining *b*, and flexible bottom *e*, substantially as and for the purposes herein set forth.

DAVID JACKSON.
