UNITED STATES PATENT OFFICE.

JOSEPH KAYSER, OF NEW YORK, N. Y.

IMPROVEMENT IN TOY BOXES.

Specification forming part of Letters Patent No. 176,228, dated April 18, 1876; application filed February 28, 1876.

To all whom it may concern:

Be it known that I, JOSEPH KAYSER, of the city, county, and State of New York, have invented a new and Improved Paper Box, of which the following is a specification:

In the accompanying drawing, Figure 1 represents a top view, and Figs. 2 and 3 are vertical longitudinal and transverse sections, respectively, on the lines C C, Fig. 1, and *x x*, Fig. 2, of my improved paper box.

Similar letters of reference indicate corresponding parts.

The object of my invention is to provide an improved box for candies, collars, and other purposes, which produces, by the opening and closing of the drawer, a change of pictures on the top part of the box so as to form thereby a neat and effective device for centennial and other purposes.

The invention consists of a paper box whose top part is made of lateral strips, in connection with a series of strips, which are placed between the same, and moved past them, forward and backward, by a slide piece, actuated by the opening and closing of the drawer of the box.

In the drawing, A represents a paper box of any size or shape, made with a sliding drawer, B. The top part of the box A is arranged with lateral strips C, that are secured at the ends to the top part, and printed to represent a picture, national emblems, or colors, or any other appropriate device. A second series of lateral strips, C', is placed intermediately between the top strips, and carried forward so as to cover the same, or back-

ward so as to be covered by the top strips by means of a central slide piece, D, to which the lower strips are attached. The slide piece D is provided with end flanges, shoulders, or ribs *a*, that come in contact with the rear wall of the drawer of the box when the same is opened or closed, so as to produce thereby the forward and backward motion of the drawer strips. The lower strips are printed with a picture or colors different from that of the top strip, and expose, by the opening of the box the lower strips to view, and by the closing of the box, the exhibition of the top strips and picture. This automatic changing of the pictures by the opening and closing of the box, admits an infinite variety of surprising effects, and forms thereby a neat box that is adapted for application in various trades, and also for packing up articles for centennial purposes.

Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is—

A toy box made of paper, or other material, provided with a drawer, and having at its upper part two sets of transverse strips, C C', the first being stationary and the latter movable, and arranged to slide backward and forward and in between and over the stationary set by the opening and closing of the box-drawer, substantially in the manner and for the purpose described.

JOSEPH KAYSER.
