## UNITED STATES PATENT OFFICE.

HENRY FREEMAN, OF ANSONIA, CONNECTICUT.

## IMPROVEMENT IN CARPET-BEATERS.

Specification forming part of Letters Patent No. 176,853, dated May 2, 1876; application filed November 16, 1875.

To all whom it may concern:

Be it known that I, Henry Freeman, of Ansonia, in the county of New Haven and State of Connecticut, have invented a new Improvement in Carpet-Whips; and I do hereby declare the following, when taken in connection with the accompanying drawings and the letters of reference marked thereon, to be a full, clear, and exact description of the same, and which said drawings constitute part of this specification, and represent, in—

Figure 1, perspective view; Fig. 2, central section.

This invention relates to a device for whipping or dusting carpets and like purposes; and it consists in a handle provided with several strands of leather, one end of each of the strands secured in the handle by means of a headed nail driven between the several inserted ends into the handle below, but so as to leave the others free, all as more fully hereinafter described.

A is a handle of a convenient form to be grasped by the hand, having at its lower end a socket, in which are inserted the ends of the strands a b c of leather, the ends of the three united and bound together at one end,

and that end inserted into the handle A, and secured by a headed nail, d, driven between the three into the handle, as seen in Fig. 2, leaving the outer ends free.

This instrument is used in the same manner as the common whipping-stick, the numerous flexible strands each making their own independent blow, thereby practically multiplying the number of blows, the flexibility adding materially to the effect of the blow.

I am aware that a whip with several lashes attached is a common device, and known as a cat-o'-nine-tails.

I claim—

As an article of manufacture, the carpetwhip described, consisting of the handle A, having a socket at one end, the independent strands a b c inserted in said socket, and retained therein by means of the headed nail d passing through said socket and into the wood of the handle, all as and for the purpose set forth.

HENRY FREEMAN.
