UNITED STATES PATENT OFFICE.

JETTE MULDER, OF CHICAGO, ILLINOIS.

IMPROVEMENT IN BAG-HOLDERS.

Specification forming part of Letters Patent No. **180,151**, dated July 25, 1876; application filed March 10, 1876.

To all whom it may concern :

Be it known that I, JETTE MULDER, of the city of Chicago, Cook county, Illinois, have invented a certain new and useful Improvement in Bag-Holder and Measure; and I do hereby declare that the following is a full, clear, and exact description of said invention, reference being had to the accompanying drawings, making a part of this specification, in which—

Figure 1 is a front view of my invention. Fig. 2 is a side view; Fig. 3, a sectional view through *s s* at Fig. 1.

Similar letters of reference indicate corresponding parts in all of the figures.

To enable others skilled in the art to make and use my invention, I will proceed to describe the same.

The invention consists of a hopper, A, made to hold two bushels of grain, or any other amount. The hopper is supported by the legs *l l l*. The mouth of sack C is placed under the projection N, and supported and kept in position by hook H, attached to rod *r*. B represents a slide, which can be lowered or raised

at pleasure. When raised, the grain passes out with freedom. *b b* represent grooves or supports, in which slide B works. *h h* represent handles attached to the hopper, for the purpose of more easily removing it from place to place.

The hopper can be made out of any ordinary metal or sheet-iron, as desired, with legs of metal or wood.

Measuring-marks can be made on the inside of the hopper, to designate the amount of grain in the measure at a given time.

What I claim as new, and desire to secure by Letters Patent of the United States, is as follows:

A measuring bag-holder composed of the hopper A, provided with an exterior vertical slide, B, to close the outlet, and a suspending-rod, *r*, to support the bag, combined with a bottom chute, N, and supporting-legs, substantially as set forth.

JETTE MULDER.
