UNITED STATES PATENT OFFICE.

THOMAS J. JURY, OF SPENCER, INDIANA.

IMPROVEMENT IN LAMP-BRACKETS.

Specification forming part of Letters Patent No. 195,289, dated September 18, 1877; application filed July 9, 1877.

To all whom it may concern:

Be it known that I, THOMAS J. JURY, of Spencer, in the county of Owen and State of Indiana, have invented a new and Improved Combined Spool-Stand and Lamp-Holder, of which the following is a specification:

This invention has for its object the combination, with a sectional jointed bracket and clamp, of a rotary spool-stand and a lamp-holder, as will be hereinafter explained.

In the annexed drawings, Figure 1 is a side elevation of the invention, partly in section. Fig. 2 is a top view.

Similar letters of reference indicate corresponding parts.

The letter A designates a bracket, which is composed of sections a a^1 a^2 jointed together, so that they will articulate freely, and can be extended or contracted at will. The section a is secured to two-jaws, B, to which a clamp-screw, b , is applied, for the purpose of fastening the bracket A to the edge of a table.

C designates a horizontal stand, which is free to rotate on a post, c , that is secured to the section a^2 , and into the upper side of which stand are fixed a number of pins, d , intended to receive spools of thread and allow the spools

to rotate freely while the thread is being unwound from them.

The stand C shown in the drawings is hexagonal, and is constructed with pockets e e , a pin-cushion, f , and a pivoted drawer, K, for receiving such articles as are useful about a lady's work-stand.

The section a^2 has cast entire with it, or secured to it, a shelf, D, which supports a lamp, E. This lamp is held in its place on the shelf by means of fixed lugs h and a movable lug, i , which latter is confined by means of a clamp-screw, g , and allows the lamp to be removed from the shelf.

Having thus described my invention, I claim as new and desire to secure by Letters Patent—

The jointed extensible bracket A, having a clamp on one end and a lamp-shelf, D, on the other end, provided with fixed and movable lugs h i , in combination with the rotating spool-holder C, substantially as described.

THOMAS J. JURY.
