UNITED STATES PATENT OFFICE.

JOSEPH KINTZ, OF WEST MERIDEN, CONNECTICUT, ASSIGNOR TO HIMSELF
AND PARTRICK J. CLARK, OF SAME PLACE.

CIGAR-LIGHTING STAND.

SPECIFICATION forming part of Letters Patent No. 227,267, dated May 4, 1880.

Application filed December 31, 1879.

To all whom it may concern:

Be it known that I, JOSEPH KINTZ, of West Meriden, New Haven county, and State of Connecticut, have invented a new and useful
5 Improvement in Cigar-Lighting Stands, of which the following is a specification.

My improvements relate to lamp-stands for cigar-lighting, and have for their object to produce a stand of ornamental character which
10 may be packed closely for transportation and readily put together for use.

In the drawings, Figure 1 is an elevation of my improved cigar-lighter. Fig. 2 is a sectional plan view on line *x x*, Fig. 1.

15 Similar letters of reference indicate corresponding parts.

A is the glass or porcelain fount attached upon the spun-metal spindle *a*, that is secured upon the base *b*, of metal or stone.

20 *c* is the burner attached upon the top of the fount A and fitted with a glass shade, *d*.

B B are the tapering alcohol-cups, made of glass, metal, or other suitable material, and supported by the yokes C C, that are set around
25 the fount A. The covers *f* of cups B are removable, as usual.

The fount A, as shown, is made of tapering form. The yokes C, as shown most clearly in Fig. 2, consist each of a central ring portion,

g, around the fount, and the smaller rings *h h* 30 at the ends, which receive the cups B. The ring *g* of the upper yoke is smaller than the ring of the lower yoke, so that when placed over the fount they are supported at the required distance apart, while the rings *h* of the
35 upper yoke are the largest, to conform to the size of the tapering cups B.

It will be seen that the rings C are retained in place by their own weight and the cups B are held without other fastenings.

In putting the parts together it is only necessary to place the yokes C over the fount and the cups B in the rings *h*, and these parts may be detached with the same facility and the
45 lighter packed in small compass.

The above-described construction furnishes a handsome and substantial stand.

Having thus described my invention, I claim as new and desire to secure by Letters Patent—

50 A cigar-lighting stand having a fount, A, of glass, fixed upon a suitable support and fitted with the detachable yokes C and cups B, substantially as shown and described.

JOSEPH KINTZ.
