# UNITED STATES PATENT OFFICE.

ALBERT PATITZ, OF WEST MERIDEN, CONNECTICUT, ASSIGNOR TO BRADLEY & HUBBARD MANUFACTURING COMPANY, OF SAME PLACE.

## CIGAR-LIGHTER LAMP.

SPECIFICATION forming part of Letters Patent No. 232,058, dated September 7, 1880.

Application filed July 2, 1880. (No model.)

*To all whom it may concern:*

Be it known that I, ALBERT PATITZ, of West Meriden, in the county of New Haven and State of Connecticut, have invented a new  
5 Improvement in Cigar-Lighter Lamps; and I do hereby declare the following, when taken in connection with the accompanying drawings and the letters of reference marked thereon, to be a full, clear, and exact description of  
10 the same, and which said drawings constitute part of this specification, and represent, in—

Figure 1, a sectional front view; Fig. 2, a top view of the bracket-arms.

This invention relates to an improvement in  
15 the construction of that class of cigar-lighter lamps which are provided with alcohol-fount or taper-receiver at each side the body of the lamp; and the invention consists in the construction as hereinafter described, and particularly recited in the claim.

A represents the lower part of the base, and B the upper part, with a division between to receive the bracket D. The lamp-fount C is arranged upon the upper section. D is the  
25 lighter-receiver bracket, which is constructed with an opening, *d*, through its center, so as

to set onto the shoulder *a* of the lower part of the base and to receive the lower end, *b*, of the upper part.

From the fount a bolt, E, extends down 30 through the two parts of the base and the bracket-arms, and provided with a nut, *e*, at the bottom, so that the parts are bound together, the upper and lower part of the base grasping the bracket-arms between them, so 35 as to hold them firmly. Each of the arms D is provided with the lighter-receivers F.

This invention simplifies the construction of the lamp, and makes the connection between the lighter-receiver and the base very light 40 and tasteful, at the same time very firm and strong.

I claim—

A cigar-lighter lamp having the bracket-arms D, arranged and supported between the 45 two sections of the base, and means, substantially such as specified, for securing the parts together, all substantially as described.

ALBERT PATITZ.
