UNITED STATES PATENT OFFICE.

FREDERICK E. HEINIG, OF LOUISVILLE, KENTUCKY, ASSIGNOR TO DICK, MIDDLETON & CO., OF SAME PLACE.

TAG FOR TOBACCO.

SPECIFICATION forming part of Letters Patent No. 249,350, dated November 8, 1881.

Application filed August 20, 1881. (No model.)

To all whom it may concern:

Be it known that I, FREDERICK E. HEINIG, of Louisville, Kentucky, have invented a new and useful Improvement in Tags for Tobacco, of which the following is a full, clear, and exact description, reference being made to the accompanying drawings, as a part of this specification, in which—

Figure 1 is a perspective view of my invention. Fig. 2 is another perspective view, showing different lettering. Fig. 3 is a section through $x x$, with points bent. Fig. 4 is a blank for my tag before being corrugated.

The object of my invention is to furnish an attractive tag for tobacco and other packages, on which may be printed, or otherwise produced, two different labels or words; and it consists in corrugating the tag so as to present flat surfaces in two different directions, as hereinafter more fully explained.

To enable others skilled in the art to make and use my invention, I will proceed to describe the exact manner in which I have carried it out.

In the drawings, A shows the blank for my tag cut diamond-shaped, with two sharp points,

$a a$, to be bent down at right angles, by which the tag is secured in position. The residue of the tag is corrugated, as shown in Fig. 3. On the two sets of faces $b b'$ of these corrugations may be printed, or otherwise produced, two different sets of letters or figures, as may be desired, as shown in Figs. 1 and 2.

I do not confine myself to a diamond-shaped tag, as it is evident that the shape may be greatly varied without departing from the spirit of my invention.

Having thus explained my invention, what I claim as new, and desire to secure by Letters Patent, is—

As a new article of manufacture, a tobacco-tag formed from a blank with two sharp points bent down for fastenings and the remaining portion corrugated so as to present flat surfaces in two different directions, adapted to receive letters or figures, substantially as and for the purpose set forth.

FREDERICK E. HEINIG.
