UNITED STATES PATENT OFFICE.

FRANK PIERRE GUIGON, OF FRANKLIN, MASSACHUSETTS.

TAG-ATTACHING DEVICE

SPECIFICATION forming part of Letters Patent No. 318,614, dated May 26, 1885.

Application filed February 14, 1885. (No model.)

To all whom it may concern:

Be it known that I, FRANK PIERRE GUIGON, a citizen of the United States, residing at Franklin, in the county of Norfolk, in the State of Massachusetts, have invented a new and improved tag-attaching or suspending device for attaching memorandum-tags to bodies and running-gears of carriages or other articles while in process of painting or at other times; and I do hereby declare that the following is a full and exact description thereof, reference being had to the accompanying drawings, and to the letters of reference marked thereon.

Figure 1 is a side view of the entire hanger with tag attached. Fig. 2 is a front view of the same. Fig. 3 is a side view of the hanger open for the insertion of the tag. Fig. 4 is a front view of the hanger. Fig. 5 is a side view of the same.

Similar letters refer to similar parts throughout the several views.

The straight end A, the large loop B, the hook C, and the eye D constitute the whole hanger. The addition of an eye, E, bent on the straight end A of the hanger, is for the pur-

pose of more readily hanging it upon any convenient nail or hook, and it may be employed for holding a large number of tags. In Figs. 1 and 2 a tag, T, is shown in place upon the hanger.

Tags can be hung upon or detached from the hanger by disengaging the hook C from the eye D and passing the hook C through the eyelet in the tag. Tags can be placed upon or removed from the file in the same way.

At C', Fig. 1, the hooking of the hanger is shown to be made more secure by the hook C being partially closed by pressure, as with the finger and thumb.

What I claim as my invention, and desire to secure by Letters Patent, is—

An improved tag-attaching device consisting of a wire bent to form an eye, E, a straight portion, A, an eye, D, and a loop, B, terminating in a free end hook, C, adapted to interlock with the eye D, all substantially as set forth.

FRANK PIERRE GUIGON.
