

UNITED STATES PATENT OFFICE

ALBERT N. BENDER, OF MANHATTAN, KANSAS.

STOVE-POLISH.

SPECIFICATION forming part of Letters Patent No. 329,529, dated November 3, 1885.

Application filed September 14, 1885. Serial No. 177,092. (Specimens.)

To all whom it may concern:

Be it known that I, ALBERT N. BENDER, a citizen of the United States, residing at Manhattan, in the county of Riley and State of Kansas, have invented a new and useful Composition of Matter to be Used for Polishing Stoves and Preventing Iron from Rusting, of which the following is a specification.

My composition consists of the following ingredients, combined in the proportions stated, viz: two parts of dammar-varnish to two parts of turpentine and one part of drier and one part of black-lead; thin with gasoline to desired consistence. These ingredients are to be thoroughly mingled by agitation. Apply with a brush in the ordinary manner of using paint or common stove-blackening.

I do not confine myself to the exact proportions of the ingredients named, because they

may perhaps be varied according to the condition of the material to which the composition is to be applied.

I am aware that paints and stove-polishes have been made in which black-lead and mineral oils were used, and this I do not claim; but

What I do claim as a new composition of matter, and desire to secure by Letters Patent, is—

A compound of dammar-varnish, turpentine, drier, black-lead, and gasoline, substantially as and for the purposes set forth.

In testimony whereof I affix my signature in presence of two witnesses.

ALBERT N. BENDER.

Witnesses:

W. L. HOFER,

HY. W. STACKPOLE.
