# UNITED STATES PATENT OFFICE.

WILLIAM JÜNGERMANN, OF STAPLETON, NEW YORK.

## TOY TRUMPET.

SPECIFICATION forming part of Letters Patent No. 350,493, dated October 12, 1886.

Application filed January 14, 1886. Serial No. 188,530. (No model)

*To all whom it may concern:*

Be it known that I, WILLIAM JÜNGERMANN, of Stapleton, in the county of Richmond, State of New York, have invented certain new and  
5 useful Improvements in Toy Trumpets, of which the following is a specification.

This invention relates to an improved toy trumpet for children's use; and the invention consists of a toy trumpet composed of a conical body and a circular plate carrying the reed,  
10 said plate being wedged transversely within the body of the trumpet.

In the accompanying drawings, Figure 1 represents a side elevation of my improved toy  
15 trumpet. Fig. 2 is a vertical longitudinal section of the same; and Fig. 3, a vertical transverse section on line *x x*, Fig. 2.

Similar letters of reference indicate corresponding parts.

Referring to the drawings, A represents the  
20 conical body of my improved toy trumpet, which body is made of paper or other suitable material, and ornamented in any suitable manner. It is provided with a paper or other  
25 handle, *a*, that is glued or otherwise attached to the body A. Into the body A is inserted,

from the larger end a reed, B, that is forced forward into the body until it is retained transversely to the axis of the same, without special fastening devices, by the elasticity of the pa-  
30 per or other material from which the body is made. The tongue *b* of the reed B projects toward the narrow end or mouth-piece of the trumpet, so that on blowing into the small end or mouth-piece the reed is sounded. In  
35 this manner a toy trumpet is obtained that can be manufactured cheaply, and that forms a neat musical toy for children's use.

Having thus described my invention, I claim as new and desire to secure by Letters Patent—  
40

The combination, in a toy trumpet, of a conical body with a circular plate carrying the reed, said plate being wedged transversely within the body of the trumpet, substantially  
45 as set forth.

In testimony that I claim the foregoing as my invention I have signed my name in presence of two subscribing witnesses.

WILLIAM JÜNGERMANN.
