# UNITED STATES PATENT OFFICE.

GEORGE H. ROSE, OF CANTON, OHIO.

## COLLAR-BUTTON.

SPECIFICATION forming part of Letters Patent No. 361,324, dated April 19, 1887.

Application filed February 12, 1887. Serial No. 227,357. (No model.)

*To all whom it may concern:*

Be it known that I, GEORGE H. ROSE, a citizen of the United States, residing at Canton, in the county of Stark and State of Ohio, have invented certain new and useful Improvements in Collar-Buttons; and I do hereby declare that the following is a full, clear, and exact description of the same, reference being had to the annexed drawings, making a part of this specification, and to the letters and figures of reference marked thereon, in which—

Figure 1 is a view of a collar, showing the button placed in proper position. Fig. 2 is a detached view of the collar-button.

The present invention has relation to collar-buttons; and its nature consists in its peculiar manner of construction, hereinafter described, and particularly pointed out in the claim.

In the accompanying drawings, A represents the shank or stem of the button, which is formed flat, for the purpose of preventing the button proper from turning in the button-holes. To one end of the shank or stem A is attached, in the ordinary manner, the head *a*, and to the opposite end is attached the segmental head *b*, which head may be formed integral with the shank A. The heads *a* and *b* are so adjusted that they will be parallel to

each other. The segmental head *b* is adjusted so as to be flush with the shank A upon the bottom or lower edge, and is so formed for the purpose of offering very little resistance in placing the collar B upon the head *b*.

It will be seen that by providing the segmental head *b* and having said head stand or placed parallel with the head *a*, collars can be easily attached and detached, and at the same time will provide an easy means of attaching a necktie.

Having fully described my invention, what I claim as new, and desire to secure by Letters Patent, is—

As an improved article of manufacture, the collar-button herein shown and described, consisting of a flat shank, A, and segmental head *b*, its inner or connected portion flush with said shank, and the circular head *a*, the two heads being parallel with each other, substantially as set forth.

In testimony that I claim the above I have hereunto subscribed my name in the presence of two witnesses.

GEORGE H. ROSE.
