UNITED STATES PATENT OFFICE.

CHARLES DEITSCH AND CARL G. PFINGSTEN, OF NEW YORK, N. Y.

FRAME FOR SATCHELS, PURSES, BAGS, &c.

SPECIFICATION forming part of Letters Patent No. 368,878, dated August 23, 1887.

Application filed June 30, 1887. Serial No. 242,977. (No model.)

To all whom it may concern:

Be it known that we, CHARLES DEITSCH and CARL G. PFINGSTEN, the said DEITSCH being a citizen of the United States and the said PFINGSTEN a subject of the Emperor of Germany, both residing at New York, in the county and State of New York, have invented new and useful Improvements in Frames for Satchels, Purses, Bags, and other Articles, of which the following is a specification.

This invention relates to improvements in frames for such articles as satchels, purses, bags, porte-monnaies, and the like, as set forth in the following specification and claim and illustrated in the accompanying drawings, in which—

Figure 1 is a side elevation of a frame. Fig. 2 is a detail plan view of two parts of a frame with their inlays. Fig. 3 is a section in the plane *xx*, Fig. 2. Fig. 4 is a transverse section of a frame complete.

Similar letters indicate corresponding parts.

In the drawings, the letter A indicates an article such as a purse, bag, or the like, of leather, cloth, or other suitable material. B is the frame or jaws, hinged together at E. The edges of the bag A are secured to the jaws by being placed upon the seats C, after which the

inlays D are riveted or secured to the jaws. The edges of the bag are secured between the inlays and the seats C.

As seen in Figs. 3 and 4, the seats C are depressed, so that when the bag A and the inlays D are secured in place the inlays D will be flush with the inner edges or faces of the jaws B. Articles which are contained in the bag are thus not apt to catch at the jaws B, as the inlays D are on a level with the inner faces of said jaws, as seen in Fig. 4.

What we claim as new, and desire to secure by Letters Patent, is—

The combination of the jaws B, each having its lower edge provided with the depressed seat C, the bag A, having its edges arranged in said seats, and the two inlays D, secured, respectively, upon the edges of the bag flush with the inner faces of the jaws, substantially as shown and described.

In testimony whereof we have hereunto set our hands and seals in the presence of two subscribing witnesses.

CHAS. DEITSCH. [L. S.]
