UNITED STATES PATENT OFFICE.

WARREN H. TAYLOR, OF STAMFORD, CONNECTICUT, ASSIGNOR TO THE
YALE & TOWNE MANUFACTURING COMPANY, OF SAME PLACE.

COMBINED GLASS-HOLDER AND NUMBER-PLATE FOR DOORS.

SPECIFICATION forming part of Letters Patent No. 370,166, dated September 20, 1887.

Application filed April 13, 1886. Serial No. 198,745. (No model.)

To all whom it may concern:

Be it known that I, WARREN H. TAYLOR, of Stamford, in the county of Fairfield and State of Connecticut, have invented a certain
5 new and useful Glass-Holder and Number-Plate for Doors of Pigeon-Holes or Post-Office Lock-Boxes, of which the following is a specification, reference being had to the accompanying drawings, in which—

10 Figure 1 is a view of the back side of a door having my invention applied to it. Fig. 2 is a section of the same on the line 2 2 of Fig. 1. Fig. 3 is a section on the line 4 4 of Fig. 1.

15 My invention consists of a peculiar spring glass-holder and number-plate combined with a glazed door, as hereinafter described. The plate is of spring metal, and is fastened to each side of the door-frame, and is of such shape that its middle part presses against the glass
20 to hold it in position and prevent rattling and at the same time display a box-number.

B indicates the body of the door; C, an ordinary spring-bolt; and D an ordinary lock.

E indicates a combined number-plate and glass-holder. This is curved or inclined at its
25 ends F, which are fastened to the frame by screws G, or otherwise, so as to cause the central portion or number-plate to press forward against the glass and hold it securely in place.

What I claim, and desire to secure by Letters Patent of the United States, is— 30

The combination, with a door, of a glass mounted in the door, and a combined spring glass-holder and number-plate secured at its
35 ends to the door and bearing against the glass, substantially as set forth.

In testimony whereof I have hereunto subscribed my name.

WARREN H. TAYLOR.
