UNITED STATES PATENT OFFICE.

LEWIS PRAY, OF PORTLAND, MAINE.

PIANO LAMP-HOLDER.

SPECIFICATION forming part of Letters Patent No. 401,064, dated April 9, 1889.

Application filed September 15, 1888. Serial No. 285,541. (No model.)

To all whom it may concern:

Be it known that I, LEWIS PRAY, a citizen of the United States, residing at Portland, county of Cumberland, and State of Maine, have invented a new and useful Piano Lamp-Holder, of which the following is a specification.

My invention relates to a lamp-holder for pianos.

10 The objects of my invention are, first, a disk with a rim around the top, and having a groove inside of rim to receive a paper shade to protect the piano from the heat of the lamp; second, a rod running through one side of
15 disk just inside of groove in the disk-rod, fastened to the disk with a collar around the rod on the top of the disk, and a screw and washer on the bottom of the disk screwed into a rod running through the disk, allowing the
20 disk to turn on the rod, the rod running to a coupling attached to a curved rod running over the top of the piano into a socket screwed to the back of the piano in the middle, a little below the top of piano, allowing the disk
25 to swing clear of the music-rack to either side of the music-rack, the coupling having a set-screw to fasten the rod and disk. The rod and disk can be raised up above the top of the piano and turned back when not in use.
30 A paper shade is inserted into the groove in the disk between the lamp and the piano. The shade is to protect the piano from the heat of the lamp. I obtain these objects by

the mechanism illustrated in the accompanying drawings, in which—

Figure 1 is an end view of a section of a piano, with the lamp-holder as it appears from an end view, swung a little forward of the proper position when in use. Fig. 2 is a front view of a section of a piano, with the lamp-
40 holder as it appears from a front view when in the proper position for use.

Similar letters refer to similar parts throughout the several views.

a is the disk; *b*, the rod; *c*, the curved rod; *d*, socket; *e*, shade; *f*, coupling; *g*, groove in the disk; *H*, music-rack.

What I claim as my invention, and desire to secure by Letters Patent, is—

1. The combination, in a piano lamp-holder, 50 of a disk, *a*, having a rim around the top and a groove inside of said rim, with a shade, *e*, inserted in said groove, all substantially as set forth.

2. The combination, in a piano lamp-holder, 55 of the disk *a*, rod *b*, secured to one side of the disk *a*, a set-screw coupling, *f*, through which the rod passes, a curved rod, *c*, attached to said coupling *f*, and a socket, *d*, fastened to the back of piano, and serving as a bearing 60 for the rod *c*, all substantially as set forth.

LEWIS PRAY.
