UNITED STATES PATENT OFFICE.

ABRAHAM J. LIGHT, OF LEBANON, PENNSYLVANIA.

ATTACHMENT FOR SCRUBBING-BUCKETS.

SPECIFICATION forming part of Letters Patent No. 413,526, dated October 22, 1889.

Application filed March 22, 1889. Serial No. 304,273. (No model.)

To all whom it may concern:

Be it known that I, ABRAHAM J. LIGHT, a citizen of the United States, residing at Lebanon, in the county of Lebanon and State of Pennsylvania, have invented a new and useful Improvement in Attachments for Scrubbing-Buckets, which improvement is fully set forth in the following specification and accompanying drawings.

10 The invention consists of a hoop or band, which may be attached to a bucket and is provided with receptacles for soap, brushes, &c.

It further consists of devices for rendering said hoop adjustable, so as to adapt it for different-sized buckets.

Figure 1 represents a perspective view of an adjustable hoop with its equipments for a bucket embodying my invention. Fig. 2 represents a top view thereof. Fig. 3 represents perspective views of detached parts.

Similar letters of reference indicate corresponding parts in the several figures.

Referring to the drawings, A designates a hoop, to which is attached the following lettered parts, either fixed or detachable, viz: the soap-box B, the brush-holder C, the case or socket D, for holding a knife for cleaning out corners or for other purposes, the hook E, for suspending the scrubbing rag or cloth, and the upwardly-extending hooks F, for sup-

porting the hoop on the top rim of the bucket. Near one end of the hoop are holes *a*, for receiving a dowel or hook *b*, attached to the other end, whereby said ends are connected. In order to prevent the ends from separating, a band *c* is placed over the same; or the said band may be secured to the end having the hook *b*. It will be noticed that by means of the openings *a* and hook *b* the hook may be adjusted to fit buckets of different sizes, and as equipped produces a useful and convenient device for the purposes intended.

I am aware that it is not new to employ an adjustable band as a broom-holder; neither is it new to employ, in connection with a bucket, an interior band with clips to hold brushes; but I am not aware that the device herein described and claimed is old.

Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is—

A bucket provided with an adjustable hoop having supporting hooks and receptacles attached thereto, said parts being combined substantially as described.

ABRAHAM J. LIGHT.
