

UNITED STATES PATENT OFFICE.

THOMAS J. NEWBERY, OF PERDUE HILL, ALABAMA, ASSIGNOR OF ONE-
HALF TO WILLIAM HENDERSON, OF SAME PLACE.

TETTER-SALVE.

SPECIFICATION forming part of Letters Patent No. 438,636, dated October 21, 1890.

Application filed July 14, 1890. Serial No. 358,750. (No specimens.)

To all whom it may concern:

Be it known that I, THOMAS J. NEWBERY, a citizen of the United States, residing at Perdue Hill, in the county of Monroe and State of Alabama, have invented certain new and useful Improvements in Medicinal Compounds; and I do declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same.

My invention relates to improvement in that class of topical remedies used as salves, and is intended for use in cases of tetter or other skin diseases by external application. It is composed of the following ingredients and the proportions stated, by weight, namely: Venice turpentine, two parts; spirits turpentine, two parts; hog's lard, two parts; red precipitate, one part; extract of elephantopus

tomentosus, (commonly known as "elephant's-foot,") two parts. These ingredients are mixed at an ordinary temperature.

This composition is applied to the diseased parts of the skin in the usual manner of applying external remedies.

What I claim to be new, and desire to secure by Letters Patent, is—

The herein-described medical compound for the cure of skin diseases, the same consisting of Venice turpentine, spirits of turpentine, hog's lard, the extract of elephantopus tomentosus, and red precipitate, in substantially the proportions specified.

In testimony whereof I affix my signature in presence of two witnesses.

THOMAS J. NEWBERY.

Witnesses:

JAMES THAMES,
W. M. FARR.
