(No Model.)

W. T. RUTHERFORD & A. J. ROBBERSON. PILLOW SHAM HOLDER.

No. 458,758.

Patented Sept. 1, 1891.

United States Patent Office.

WILLIAM THOMAS RUTHERFORD AND ALEXANDER JONES ROBBERSON, OF NAPA, CALIFORNIA, ASSIGNORS OF ONE-THIRD TO D. H. SWITZER, OF SAME PLACE.

PILLOW-SHAM HOLDER.

SPECIFICATION forming part of Letters Patent No. 458,758, dated September 1, 1891.

Application filed April 13, 1891. Serial No. 388,775. (No model.)

To all whom it may concern:

Be it known that we, WILLIAM THOMAS RUTHERFORD and ALEXANDER JONES ROBBERSON, citizens of the United States, residing at Napa, Napa county, State of California, have invented an Improvement in Pillow-Sham Holders; and we hereby declare the following to be afull, clear, and exact description of the same.

Our invention relates to the class of holders for pillow-shams; and it consists in the novel construction and arrangement of the hook-bar which supports the pillow-sham and the means for operating and controlling said bar to raise the sham and to hold it down, all of which we shall hereinafter fully describe, and specifically point out in the claims.

The object of our invention is to provide a holder for pillow-shams of simple and compact construction and adapted to hold the sham in normal position and to raise it out of the way when not in use

Referring to the accompanying drawings for a more complete explanation of our invention, Figure 1 is an elevation of our holder, showing the hook-bar down in position to hold the sham in use. Fig. 2 is a view showing the hook-bar raised to elevate the sham out of the way when not in use. Fig. 3 is a vertical section of socket D, showing the con-

trolling-pawl.

A is the head-board of the bedstead.

B is a vertically-movable bar having suitable hooks b. This bar is carried by a stem 35 C, which extends downwardly and is mounted in a suitable guide or guides, in which it is adapted to move up and down. The guide here shown is a socket-plate D, secured to the head-board.

Which are pivoted to a fixed bearing below, here shown as connected with the top of the plate D, and their upper members are pivoted to the hook-bar B. Springs F act on these levers, and their tendency is to extend them vertically to raise the hook-bar. Supplemental springs G assist in this action. The face of the stem C of the hook-bar is

made with rack-teeth or sockets c, and with these engages the end of a spring-pawl H, the 50 head of which has a knob or button h, by seizing hold of which the pawl may be withdrawn from its engagement.

The operation of our holder is as follows:
The pillow-sham is suspended from the hookbar B. When the bed is made up, the bar B
is pushed down, its stem moving freely by the
pawl, and when the bar is moved down far
enough to allow the sham to fall properly
over the pillow it is held in that position by 60
the engagement of the pawl H with the rackface of stem C. Now when the bed is to be
used the pawl is pulled back from its engagement, and thereupon the springs, acting
through the levers, raise the hook-bar, and 65
thus the sham is lifted up out of the way and
held there until needed again.

Having thus described our invention, what we claim as new, and desire to secure by Let-

1. A pillow-sham holder comprising the hook-bar having a rack-stem depending from its middle portion, a guide through which the stem passes, a retaining-pawl for the rack-stem, the jointed levers having their outer 75 ends connected with the guide and hook-bar, respectively, and springs acting against the lower members of the levers for adjusting the position of the hook-bar, substantially as herein described.

2. A pillow-sham holder consisting of the vertically-movable hook-bar having the rack-stem, the guide in which the stem is mounted, the pawl engaging the stem for holding the bar down, the toggle-levers connected with 85 the bar, and suitable springs for actuating the levers and raising the bar, substantially as herein described.

In witness whereof we have hereunto set our hands.

WILLIAM THOMAS RUTHERFORD.
ALEXANDER JONES ROBBERSON.
