# UNITED STATES PATENT OFFICE

JENNIE M. MORRISON, OF MILWAUKEE, WISCONSIN.

## CONVERTIBLE COUCH.

SPECIFICATION forming part of Letters Patent No. 470,251, dated March 8, 1892.

Application filed June 15, 1891. Serial No. 396,226. (No model.)

*To all whom it may concern:*

Be it known that I, JENNIE M. MORRISON, a citizen of the United States, and a resident of Milwaukee, in the county of Milwaukee, and in the State of Wisconsin, have invented certain new and useful Improvements in Convertible Couches; and I do hereby declare that the following is a full, clear, and exact description thereof.

My invention has for its object to provide an article of furniture having the normal appearance of a stool or ottoman, but which in reality is a convertible couch for the use of persons taking injections, it being desirable in order to obtain the best results that any one thus treated assume a recumbent attitude, and that there be a means for carrying off waste fluid to a suitable receptacle.

My invention therefore consists in certain peculiarities of construction and combination of parts, to be hereinafter described, with reference to the accompanying drawings, and subsequently claimed.

In the drawings, Figure 1 represents a plan view of a convertible couch constructed according to my invention; Fig. 2, a vertical longitudinal section of the same, taken on line 1 1 of the preceding figure; Fig. 3, a transverse section on line 3 3 of Fig. 2, and Fig. 4 a similar view on line 4 4 of Fig. 1.

Referring by letter to the drawings, A represents the legs, and B the top, of a stool that constitutes one section of my couch. Hinged to one end of the stool-top B is a leaf C of corresponding length and width, the free end of this leaf being provided with a folding support D, as best illustrated in Figs 2 and 3. That end of the stool-top B farthest from the meeting edge of the leaf C is cut away in the center to form a curved recess *b*, that is guarded by a strip *c* of stiff leather or other suitable material tacked or otherwise rigidly secured to said end of the stool-top, and the upper side of this stool-top is preferably hollowed out adjacent to the recess, in order to form an inclined concavity *d*, that conforms to the body of the person using the couch. Depending from the stool-top B, adjacent to the recess *b* therein, is a spout E, of rubber or other suitable material, and supported in guides *e*, that also depend from the under side of said stool-top, are sliding rods F, pro-

vided at their outer ends with stirrups *f*, these sliding rods being secured in their adjusted position by means of set-screws *g*, having their bearings in certain of said eyes, as best illustrated in Fig. 4. The leaf C is preferably provided with a recess *h*, designed to receive the support D, this recess being of such depth that said support and leaf are flush when the latter is swung on its hinges to lie on top of the stool above described. The leaf and its support being folded on the stool and the stirrup-rods run in, the device above described takes up but little room and at the same time serves as a convenient article of furniture, such as a seat or stand. If found desirable, a cushion provided with a curtain may be employed to cover the whole device when folded up, and thus it will be given the appearance of an ottoman. The leaf C being positioned, as shown in Figs. 1 and 2, and the stirrup-rods F adjusted, the person to receive an injection reclines on the couch thus formed, with the feet in the stirrups *f*, the head and shoulders being rested on said leaf. The waste fluid from the injection drains off through the spout E into a vessel previously positioned, and thus the soiling of carpets or floors is avoided.

A device constructed as above described can be placed upon the market at a comparatively low cost and will be found of material convenience to persons requiring frequent injections, as such persons can get themselves into the best possible position to obtain benefit from the treatment, and there is no inconvenience in the matter of the disposition of the waste fluid.

When not in its special use, the identity of the device may be readily concealed, as above described, and said device employed as a useful article of furniture in any apartment of a house.

Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is—

1. A stool having one end of its top recessed and provided with a depending spout, a folding leaf connected to the other end of the stool-top, a support for the leaf, and stirrups adjustable on said stool, substantially as set forth.

2. A stool having one end of its top recessed

and provided with a guard-strip, a depending  
spout adjacent to the recess in the stool-top,  
a folding leaf connected to the other end of  
the stool-top, and stirrups adjustable on said  
5 stool, substantially as set forth.

3. A stool having a gradually-deepening  
concavity in the upper side of its top and re-  
cessed at one end of this top, a depending  
spout adjacent to the recess in the stool-top,  
10 a folding leaf connected to the other end of  
said top, a support for the leaf, and stirrups  
adjustable on the stool, substantially as set  
forth.

4. A stool having a gradually-deepening  
15 concavity in the upper side of its top and re-

cessed at one end of this top, a guard-strip  
for the recess, a depending spout adjacent to  
said recess, a folding leaf connected to the  
other end of said top, a support for the leaf,  
and stirrups adjustable on the stool, substan- 20  
tially as set forth.

In testimony that I claim the foregoing I  
have hereunto set my hand, at Milwaukee, in  
the county of Milwaukee and State of Wis-  
consin, in the presence of two witnesses.

JENNIE M. MORRISON.
