UNITED STATES PATENT OFFICE.

SAMPSON H. BROWN, OF LOCKHART, TEXAS.

TAG.

SPECIFICATION forming part of Letters Patent No. 573,321, dated December 15, 1896.

Application filed July 16, 1894. Serial No. 517,728. (No model.)

To all whom it may concern:

Be it known that I, SAMPSON H. BROWN, a citizen of the United States, and a resident of Lockhart, in the county of Caldwell and State of Texas, have invented certain new and useful Improvements in Devices for Marking Goods; and I do hereby declare that the following is a full, clear, and exact description of the invention, which will enable others skilled in the art to which it appertains to make and use the same, reference being had to the accompanying drawings, which form a part of this specification.

My invention relates to devices for marking dry goods of the class known in the trade as "bolt-goods" or "piece-goods," that is to say, muslin, linen, woolen cloth, and similar textile fabrics which are wound upon or around a central or inner flat base or board, so as to form a package, "bolt," or "piece," and is intended more particularly for the marking of fine and delicate fabrics, such as fine muslin or "gossamer," fine silks, laces, and similar fabrics which are easily damaged by marking by means of pinning a tag to the goods or inserting a pointed or pronged metallic tag or tag-holder between the folds or layers of the goods.

The invention consists in the novel construction and combination of parts herein-after fully described and claimed.

In the accompanying drawings, Figure 1 is a perspective view of a bolt or piece of textile or woven fabric with my improved marking device applied thereto. Fig. 2 is a perspective view showing the device applied to the inner flat board or base upon which the fabric is wound to form a bolt. Fig. 3 is a perspective view showing the device detached. Fig. 4 is a longitudinal sectional view showing the parts comprising the marking device greatly

enlarged or exaggerated to more clearly illustrate the same.

In the said drawings the reference-letter A designates a bolt of textile material wound upon and around a flat base or board B, of wood or other suitable material. My improved marking device consists of three parts—viz., the fastening or attachment flap C, an oblong or metallic loop or bail D, and the marking flap or tag proper, E. The attachment-flap C is made of paper or other fibrous or textile material and is lined with a waterproof material *c*, coated with an adhesive cement. This flap is doubled upon itself and passed around one of the limbs, *d*, of the bail or loop D. Passing around the other limb, *d'*, of said bail or loop is a flap *E'*, which may be made of any suitable material, to which is secured the marking-tag E, which may be made of stiff paper, cardboard, or any other material found convenient or desirable.

Having thus fully described my invention, what I claim is—

The herein-described improved marking device, the same consisting of a paper or fibrous or textile strip C, of flexible material, doubled upon itself around one of the limbs *d* of the oblong loop or bail D, said strip being lined with a waterproof material coated with an adhesive cement, in combination with said loop or bail and with the tag E, hinged upon the opposite parallel limb *d'*, of the intermediate bail, substantially as and for the purpose shown and set forth.

In testimony that I claim the foregoing as my own I have hereunto affixed my signature in presence of two witnesses.

SAMPSON H. BROWN.

Witnesses:

S. A. BROWN,
J. D. McMURTRY.
