UNITED STATES PATENT OFFICE.

JOSEPH CONLEY, OF MOUND CITY, MISSOURI.

COMBINED GARMENT AND HAMMOCK.

SPECIFICATION forming part of Letters Patent No. 672,730, dated April 23, 1901.

Application filed July 23, 1900. Serial No. 24,515. (No model.)

To all whom it may concern:

Be it known that I, JOSEPH CONLEY, a citizen of the United States, residing at Mound City, in the county of Holt and State of Missouri, have invented new and useful Improvements in a Combined Garment and Hammock, of which the following is a specification.

This invention relates to certain new and useful improvements in combined garments and hammocks, the object being to provide a hammock of such construction that the parts which constitute the same may be worn upon the person, as will be hereinafter set forth.

In the accompanying drawings, Figure 1 is a view showing the appearance of the end sections of the hammock when worn as a garment—for instance, as a blouse and overalls. Fig. 2 is a view showing such end sections of the hammock spread out. Fig. 3 is a detail view showing means for connecting the end sections of the hammock or the blouse and overalls together. Fig. 4 is a side elevation showing the parts arranged for use as a hammock.

The main or leading object of my invention is to provide a hammock the parts being so constructed that they are susceptible of other uses.

In military service and elsewhere it is desirable to provide blouses and overalls for use while doing rough work and as an addition or accompaniment to the usual uniform, and such garments are usually made of canvas or like fabric. In the make-up of the garments in accordance with my invention I provide the blouse A near its collar with loops *a a*, which are secured so as to be covered by the collar when the collar is turned down, and the lower end of the blouse about its skirt is provided with snap-hooks *a'*, said snap-hooks being secured to short straps, which are stitched to the skirt of the blouse at a slight distance above its lower edge. The overalls B are made up so that the general contour will be rectangular, and near the upper edge they are provided with short straps, which are adapted to hold semicircular rings *b*, which correspond in number to the snap-hooks on the inner side of the coat. These snap-hooks and rings provide means for connecting the waist portion of the overalls to the skirt end of the blouse, so that these parts may be

utilized as the end sections of a hammock. The piece of fabric B is slightly wider at its waist end to provide flaps B', and below the flaps there may be secured strips or bands *b'*, having on one side hooks *c* and on the other side eyes *c'*, and the lower edge has connected thereto loops *d d*. The section of the fabric B is divided from its lower edge to a point about opposite the lower ends of the flaps B', and where divided I provide on one side hooks *e* and on the other side eyes *e'*, said hooks and eyes being adapted to be placed in engagement with the hooks and eyes *c c'* to form the legs of the overalls, the point of junction being covered by the flaps *e²*. The hooks and eyes *e e'* may be connected or placed in engagement with each other to hold the seam together when it is desired to provide a substantially rectangular section or end portion of a hammock.

When the blouse and overalls are connected together, they may be suspended by the use of suitable supports and cords or ropes, which are passed through the loops *a* and *d* at the ends of the hammock-sections. It will be noted from the foregoing that a person having the blouse and overalls provided with my improvements may readily utilize the same as a hammock.

The hammock supports or sticks are preferably made up of sections *k k*, which may be pivoted or otherwise connected together near one end, so that when spread apart the ends will cross.

I do not wish to limit myself to the special fastening devices, as hooks and eyes, snap-hooks and rings, or buttons and buttonholes, as other equivalent means may be used without departing from my invention.

I claim—

1. A union garment made up of two pieces, one piece being constructed for use as a blouse and the other piece as overalls, the overalls having leg-sections which are divided on their inner sides to admit of the same being connected to form a piece of fabric which is substantially rectangular in shape, the parts of the union garment having means for attaching one to the other and means at opposite ends for suspending the connected garments for use as a hammock.

2. A union garment comprising a coat hav-

ing adjacent to its collar a plurality of loops for the purpose of suspending the same and adjacent to its lower edge fastening means, in combination with a pair of overalls having 5 divided legs, the waist portion of the overalls having means for connecting the same to the lower edge of the coat, and loops attached to the ends of each of the divided leg-sections and fastening devices on the adjacent edges 10 of the leg-sections, substantially as shown and for the purpose set forth.

3. A union garment comprising a coat which is provided adjacent to its collar with a plurality of converging loops, and at its lower or 15 skirt end with a series of fastening devices, in combination with a pair of overalls made up to provide flaps B' and leg-sections, each leg-section having on its longitudinal edges separable connecting means, loops secured to 20 the lower ends of the leg-sections and connecting means for engagement with the fastening devices on the skirt end of the coat, substantially as shown and for the purpose set forth.

25 4. A union garment consisting of a pair of overalls made up from a bifurcated piece of fabric, the portions on each side of the dividing-line having attached fastening means, and on the outer edges flaps, a series of fastening 30 devices attached to the outer edges of the divided portions, fastening devices attached near the waistband and loops on the ends

opposite the waistband, in combination with a coat which is provided near its collar with a plurality of loops, and at its skirt portion 35 with fastening devices which are adapted to engage with the fastening devices on the waistband of the overalls, substantially as shown and for the purpose set forth.

5. The union garment herein set forth, comprising a body-garment having adjacent to 40 its collar portion a plurality of suspending-loops and a series of fasteners attached to its bottom or lower edge and a bifurcated nether garment, each of its leg portions being di- 45 vided, the dividing-line running vertically downward from the front opening in the trunk portion and having means at its upper edge complementary to the fastening means on the bottom edge of the body-garment, loops at- 50 tached to the bottom or lower ends of each of the divided leg-sections, means for securing together the adjacent edges of said divided leg-sections whereby the said union garment may be worn as separate garments or united 55 to be used as a hammock.

In testimony whereof I have hereunto set my hand in presence of two subscribing witnesses.

JOSEPH CONLEY.
