UNITED STATES PATENT OFFICE.

MAX SCHEUER, OF NEW YORK, N. Y.

COMBINATION POCKET-BOOK.

SPECIFICATION forming part of Letters Patent No. 693,449, dated February 18, 1902.

Application filed September 23, 1901. Serial No. 76,164. (No model.)

To all whom it may concern:

Be it known that I, MAX SCHEUER, a citizen of the United States, and a resident of New York city, county and State of New York, have
5 invented certain new and useful Improvements in Combination Pocket-Books, of which the following is a specification.

This invention relates to a pocket-book of the class known as "combination" pocket-books and in which the pockets are adapted
10 to be closed by a folding cover carrying a card-case upon its inner face.

By my invention the pocket-book is more perfectly adapted for holding gloves, handkerchiefs, and similar articles carried by ladies, while any spilling of the contents of the
15 pockets will be prevented.

In the accompanying drawings, Figure 1 is an end view of my improved pocket-book,
20 showing it closed. Fig. 2 is a cross-section of the same, showing it open; and Fig. 3, an inner face view, showing it open.

The letter *a* represents the pockets, and *b* the folding cover, of a combination pocket-book. Between the cover *b* and the pockets
25 *a* I interpose a second folding cover *c*, which projects into the rearmost pocket and forms a partition that divides the same into an outer compartment *a'* and an inner compartment *a''*.
30 The cover *c* folds over the pockets *a* underneath the cover *b* and is slightly shorter than the latter, so that its end does not protrude.

Means should be provided for locking the cover *c* against the front *a''* of the pocket-book, such means consisting, preferably, of
35 a strap *d*, extending across the lower edges of the pockets and carrying the female part *e'* of a catch, the male part *e* of which is car-

ried by the cover *c*. By this fastener an ex-
pansible open-ended chamber is formed be- 40
tween the front *a''* and the flap *c*, which is adapted for the reception and retention of a handkerchief, while gloves may be slipped in between the covers *b* and *c*. The cover *b* is
provided with pockets *b'*, which, as well as 45
the pocket *a'*, formed on the outer side of cover *c*, may be used for cards, tickets, &c.

It will be seen that my improved combination pocket-book offers increased facilities
for carrying gloves, handkerchiefs, and cards. 50
Further, in combination pocket-books as heretofore constructed the contents of the pockets *a* were liable to drop out if the cover was thrown back unless the pocket-book was held
right side up. With my construction this ob- 55
jection is overcome, and while the device possesses all advantages of a combination pocket-book its contents are securely protected
against spilling.

What I claim is—

A combination pocket-book provided with
a number of pockets, an inner cover that forms
a partition within the rearmost of said pockets, means for locking said inner cover to the
front of the pocket-book, and an outer cover 65
secured to the same end of the pocket-book as the inner cover and adapted to fold over the same, substantially as specified.

Signed by me at New York city, county and
State of New York, this 21st day of September, 1901. 70

MAX SCHEUER.
