## UNITED STATES PATENT OFFICE.

## THOMAS H. MURRAY, OF CHICAGO, ILLINOIS.

## TOY OR TRICK DEVICE.

SPECIFICATION forming part of Letters Patent No. 719,126, dated January 27, 1903.

Application filed December 1, 1902. Serial No. 133,347. (No model.)

To all whom it may concern:

Be it known that I, THOMAS H. MURRAY, a citizen of the United States of America, and a resident of Chicago, Cook county, Illinois, 5 have invented a certain new and useful Improvement in Toy or Trick Devices, of which

the following is a specification.

My invention contemplates a device more in the nature of a toy or trick device; and it 10 consists of the picture or representation of the back of a man's head, provided on its reverse side with a mirror. Preferably the obverse side is also provided with an indicating device adapted to convey the impression that the re-15 verse side is provided with a picture or representation of some sort—as, for example, the face of the man whose head is shown on the obverse side. Now when the device with its obverse side in view is handed to a person 20 the latter, following the suggestion of the indicating device, turns the trick device over with the expectation of finding on the reverse side a picture of the face of the man the back of whose head is shown on the obverse side 25 or some other picture or representation. The nature of my invention will, however, hereinafter more fully appear.

In the accompanying drawings, Figure 1 shows the obverse side of one form of my in-30 vention. Fig. 2 shows the reverse side of said form of my invention. Fig. 3 shows the obverse side of another form of my invention. Fig. 4 shows the obverse side of still another

form of my invention.

As illustrated in Figs. 1 and 2, my improved toy or trick device may be substantially disklike in form and can have its obverse side provided with a picture or representation 1 of the back of a man's head. This side of the 40 disk may also be provided with an indicating device, such as the words 2, tending to convey the impression that the reverse side of the disk is provided with a picture of the man's face. As a matter of fact, however, the re-45 verse side of this disk is provided with a mirror 3. Thus, as explained, when the toy or trick device, as shown in Figs. 1 and 2, is presented with the obverse side in full view the person examining the toy or trick device will 50 first observe the picture of the back of the

man's head and then noting the indicating device will proceed to turn the disk over with the expectation of finding the man's face on

the back or reverse side.

If desired, the toy or trick device may be 55 trimmed down to the exact form or outline of the man's head, as shown in Fig. 3. In this case the indicating device 4 may be employed as a substitute for that shown in Fig. 1. Again, the toy or device as a whole may have 60 the outline or shape shown in Fig. 4. If desired, the indicating device may be omitted, as in Fig. 4.

Whatever is the form of the toy or device as a whole the essential feature consists of 65 an obverse side provided with the picture of the back of a person's head and a reverse side provided with a mirror. The picture or representation of the back of the man's head may be printed, painted in colors, or may be em- 70 bossed or raised on the surface of the obverse side of the toy, as may be found preferable or desirable.

Broadly stated, my invention consists of a picture or representation of the back of a 75 man's head having a reverse side provided with a mirror.

What I claim as my invention is—

1. A toy or trick device, consisting of a picture or representation of the back of a per- 80 son's head having the reverse side provided with a mirror, said picture or representation being of a character to prompt the person inspecting it to turn the device over with the expectation of finding the said person's face 85 on the reverse side.

2. A toy or trick device, consisting of a disk having its obverse side provided with a picture or representation of the back of a man's head, and having its reverse side provided 90 with a mirror, the obverse side being also provided with an indicating device inviting an examination of the reverse side.

Signed by me at Chicago, Cook county, Illinois, this 25th day of November, 1902.

THOMAS H. MURRAY.
