UNITED STATES PATENT OFFICE.

ROBERT M. DIXON, OF EAST ORANGE, NEW JERSEY, ASSIGNOR TO THE
SAFETY CAR HEATING & LIGHTING COMPANY, A CORPORATION OF
NEW JERSEY.

GLOBE FOR LAMPS.

SPECIFICATION forming part of Letters Patent No. 755,283, dated March 22, 1904.

Application filed February 12, 1902. Serial No. 93,712. (No model.)

To all whom it may concern:

Be it known that I, ROBERT M. DIXON, a citizen of the United States, and a resident of East Orange, Essex county, New Jersey, have
5 invented certain new and useful Improvements in Globes for Lamps, of which the following is a specification.

My invention relates to globes for lamps, and has particular reference to globes suitable
10 for use on car-lamps.

In the accompanying drawings I have shown a globe in which one form of my invention is embodied.

In the drawings, Figure I is a side view of
15 the globe, and Fig. II is a section view thereof.

In the drawings, *a* indicates the body of the globe, and in using the term "globe" I desire to be understood as also including forms other than globular. The globe is shown in the
20 present instance as entirely closed at the bottom and provided at the top with an abrupt inwardly-turned lip or portion *b*, adapted to

enter a bezel or ring and to be engaged by clasps from within.

Having described my invention, what I 25 claim, and desire to secure by Letters Patent, is—

1. As a new and useful article of manufacture, a globe for car-lamps consisting of the translucent body *a* closed at its bottom and 30 having at its upper edge an abruptly-inturned circumferential lip *b* arranged to be engaged by clasps from within.

2. As a new and useful article of manufacture, a globe for car-lamps consisting of a 35 bowl-shaped body and having at its upper edge an abruptly-inturned circumferential lip arranged to be engaged by clasps from within, the said lip bounding the open space at the top of the globe.

ROBERT M. DIXON.
